1 Welcome to the Clay Tablet Connector for Adobe Experience Manager

Welcome to the Clay Tablet Connector for Adobe Experience Manager, Special Edition for use with Lionbridge Freeway ("Connector"). This is Clay Tablet’s connector between Adobe Experience Manager and the Clay Tablet Platform. This special edition enables you to automate sending and retrieving content from Adobe Experience Manager directly to and from Freeway.

1.1 Terminology

<table>
<thead>
<tr>
<th><strong>Amazon AWS</strong></th>
<th>Amazon Web Services. A suite of web application products developed and sold by Amazon.com. Clay Tablet uses various AWS offerings in order to leverage their infrastructure and build rich, dynamic solutions for its customers, specifically, the Clay Tablet Platform. For details, see <a href="http://aws.amazon.com">http://aws.amazon.com</a>.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Amazon S3</strong></td>
<td>Amazon Simple Storage Service. For details, see: <a href="http://aws.amazon.com/s3/">http://aws.amazon.com/s3/</a>. The Connector and the Clay Tablet Platform use Amazon S3 to provide temporary storage services for the content sent to and from translation.</td>
</tr>
<tr>
<td><strong>Amazon SQS</strong></td>
<td>Amazon Simple Queue Service. For details, see: <a href="http://aws.amazon.com/sqs/">http://aws.amazon.com/sqs/</a>. The Connector uses Amazon SQS to provide Message Queue Services.</td>
</tr>
<tr>
<td><strong>Asset</strong></td>
<td>Any content or document being sent for translation, including metadata. Assets are created by the Connector.</td>
</tr>
<tr>
<td><strong>Clay Tablet (CTT)</strong></td>
<td>Clay Tablet Technologies, the corporate entity that publishes the Clay Tablet Connector and the Clay Tablet Platform.</td>
</tr>
<tr>
<td><strong>Clay Tablet Connector for AEM (&quot;Connector&quot;)</strong></td>
<td>The connector software that Clay Tablet Technologies has developed and provides, which plugs into your Adobe Experience Manager (AEM) installation to provide connectivity to our hosted Platform. In this document it is referred to as the Connector. This is the software you are installing and configuring as you work through this document.</td>
</tr>
<tr>
<td><strong>Clay Tablet Platform</strong></td>
<td>The hosted (IaaS) connectivity platform that receives and routes content from content systems, including content management systems (CMSs), to translation providers and back during implementation. Clay Tablet Technologies configures the Platform based on the number and nature of systems involved in your system architecture.</td>
</tr>
<tr>
<td><strong>Freeway</strong></td>
<td>The name of the Lionbridge translation portal for submitting content to and retrieving content from the Lionbridge translation provider.</td>
</tr>
<tr>
<td><strong>FTP Server</strong></td>
<td>File Transfer Protocol (FTP) is a standard network protocol used to transfer files from one host to another host over a TCP-based network, such as the Internet. Translation providers may receive and send files for translation using an FTP server.</td>
</tr>
</tbody>
</table>
## 1.2 About the Clay Tablet Translation Platform

Clay Tablet’s translation connectivity platform is the easiest, most flexible way to integrate content systems, including content management systems (CMSs) and other content producers, with translation providers and translation technologies.

Clay Tablet Platform is the hosted (IaaS) connectivity platform that receives and routes content from content management systems to translation providers and back, including to Lionbridge via Freeway or onDemand. It is hosted on Amazon Web Services (AWS). During implementation, Clay Tablet Technologies configures the Platform for your translation solution, based on the translation providers or systems you use. The Clay Tablet Platform uses the following services on AWS:

<table>
<thead>
<tr>
<th><strong>IaaS</strong></th>
<th>Infrastructure as a Service. The Clay Tablet Platform is an IaaS, because it is a hosted platform.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Keys</strong></td>
<td>The Connector uses keys to establish a secure, discrete connection between the Connector instance and the Platform. <strong>Very important:</strong> Do not copy the CMS address keys to multiple AEM instances, because this is a violation of the Clay Tablet License Agreement. Using the same CMS address keys on multiple AEM instances will cause the Connector to behave unexpectedly, which can result in lost translation content, orphaned projects, and inaccurate translation status reports. Clay Tablet will only support technical issues caused by duplicating or incorrectly installing CMS address keys on a time and materials basis.</td>
</tr>
<tr>
<td><strong>Lionbridge</strong></td>
<td>The publisher of the Freeway translation portal and a translation provider. Users connect to the Freeway translation portal to submit content to and retrieve content from the Lionbridge translation provider.</td>
</tr>
<tr>
<td><strong>MT</strong></td>
<td>Machine translation. The translation provider can be a machine translation service, such as Google Translate.</td>
</tr>
<tr>
<td><strong>On-Premise Platform</strong></td>
<td>A version of the Clay Tablet Platform that is hosted and managed by the Clay Tablet client, instead of hosted on AWS by Clay Tablet.</td>
</tr>
<tr>
<td><strong>Producer</strong></td>
<td>CMS or another system that sends content or documents out for translation. In this case, this is your Adobe Experience Manager.</td>
</tr>
<tr>
<td><strong>Provider</strong></td>
<td>A provider of translation services. The delivery of assets to the provider may be via an FTP server or a TMS connector.</td>
</tr>
<tr>
<td><strong>Support Asset</strong></td>
<td>Supporting documents and their metadata. Support assets are not translated by the translation provider, but they provide helpful context for the translator.</td>
</tr>
<tr>
<td><strong>TMS</strong></td>
<td>Translation management system that the translation provider uses.</td>
</tr>
</tbody>
</table>
S3 (Amazon Simple Storage Service), which provides storage services for the content sent to and from translation.

SQS (Amazon Simple Queue Service), which provides message queue services.

### 1.3 How the Connector Works with Adobe Experience Manager and Freeway

The Clay Tablet Connector ("Connector") is an important part of the Clay Tablet translation solution. The Connector is installed on your system as an add-in to Adobe Experience Manager (AEM). Its functionality is displayed to the users as part of AEM.

Your translation systems architecture might look like the configuration above. It may have additional CMSs or translation providers in addition to Lionbridge, which is accessed via Freeway, but the core concepts remain the same.

During implementation, Clay Tablet works with you and your translation providers to configure and test the other elements of your translation solution, which are the Clay Tablet Platform’s connections to your translation providers’ systems.

### 1.4 Using this Guide

**Purpose of this guide**

This guide describes everything you need to know to install and configure the Clay Tablet Connector ("Connector") for AEM. It describes the delivery package contents, system requirements, installation instructions, and configuration procedures.

**Note:** This guide describes using both the AEM Touch-Optimized UI and the Classic UI. The terminology in this guide is for classic devices, such as desktops and laptops, although it is also relevant to mobile devices, such as tablets. For detailed information about the UIs and views, as well as differences in terminology depending on device types, refer to the AEM documentation, available at [http://helpx.adobe.com/marketing-cloud/experience-manager.html?t2](http://helpx.adobe.com/marketing-cloud/experience-manager.html?t2).

**Recommendation:** Review the user guide to fully understand the powerful features of the Connector.

**Who should use this guide**

This guide is intended for AEM administrators and system integrators.
What you should already know

This document assumes that your company already has an installed instance of AEM. It also assumes that Lionbridge is your company’s translation provider, and Freeway is already set up for your company. It assumes that you have a strong working knowledge of AEM and its features.

How to find out more about the Clay Tablet Connector for AEM

For information on using the Clay Tablet Connector to send and receive content for translation from AEM, read the Clay Tablet Connector for Adobe Experience Manager User Guide, Special Edition for use with Lionbridge Freeway.

To access all Clay Tablet Connector for AEM documentation:

1. Log into AEM.
2. Do one of the following:
   - In the Touch-Optimized UI of AEM 6.0 or higher, click **Tools > Clay Tablet Connector** in the AEM rail.
   - In the Touch-Optimized UI of AEM, click **Tools** in the AEM rail. Then, in the **Granite Operations** section, click **Clay Tablet Connector**.
   - In the Classic UI of AEM, scroll down and click **Clay Tablet Connector** in the right pane.
   - In your **Web browser**, navigate to /content/ctctranslation/status.html on your AEM instance.
3. In the Clay Tablet Connector rail, click **Admin Tools**.
   This displays the **Admin Tools** menu options.
4. Click **Help**.
   A new web page opens, displaying links to the Clay Tablet Connector for AEM documentation.

Documentation conventions

This guide uses the following conventions:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Bold</strong></td>
<td>Highlights screen elements such as buttons, menu items, and fields.</td>
</tr>
<tr>
<td><strong>Courier</strong></td>
<td>Highlights input, file names, and paths.</td>
</tr>
<tr>
<td><strong>Italics</strong></td>
<td>Highlights terms for emphasis, variables, or document titles.</td>
</tr>
<tr>
<td>&gt;</td>
<td>Indicates a menu choice. For example, &quot;Select <strong>Admin Tools &gt; Configuration</strong>.&quot;</td>
</tr>
</tbody>
</table>
1.5 How to Contact Clay Tablet Support

Email @: support@clay-tablet.com
Telephone: +1-416-363-0888 option "3"
2 Before You Install

Before you begin to install the Clay Tablet Connector ("Connector") for Adobe Experience Manager, please review the system requirements, described below, and perform the following pre-installation procedures:

1. "Setting Your System Date, Time, and Time Zone Correctly" on page 11.
2. "Downloading the Delivery Package" on page 12.
4. "Creating the Clay Tablet Connector Folders" on page 14. These are the folders where the Connector stores your licensing information and your translation data.

**Very important:** Do not copy the CMS address keys to multiple AEM instances, because this is a violation of the Clay Tablet License Agreement. Using the same CMS address keys on multiple AEM instances will cause the Connector to behave unexpectedly, which can result in lost translation content, orphaned projects, and inaccurate translation status reports. Clay Tablet will only support technical issues caused by duplicating or incorrectly installing CMS address keys on a time and materials basis.

**Note:** If you are installing the Connector in a clustered environment, see "Installing and Configuring the Connector in a Clustered Environment" on page 102.

2.1 System Requirements

The Clay Tablet Connector for Adobe Experience Manager ("AEM") must be installed on the AEM Author server. The Clay Tablet Connector for AEM supports AEM versions 5.6.1 and higher.

The Clay Tablet Connector for AEM has no additional hardware or software requirements beyond those of AEM. For detailed requirements, refer to the appropriate version of the Adobe Experience Manager Technical Requirements.

2.2 Setting Your System Date, Time, and Time Zone Correctly

The Clay Tablet Connector sends content to and receives content from the Clay Tablet Platform, which is hosted in the Amazon Web Services (AWS) environment. AWS requires any machines that connect to its applications to have the correct system time and date settings.

**Important:** Before proceeding, ensure that the system date, time, and time zone are set correctly on any systems that will run the Clay Tablet Connector. If these settings are incorrect, the following error message is displayed: Error. The difference between the request time and the current time is too large.
### 2.3 Downloading the Delivery Package

1. Download the Clay Tablet Connector ("Connector") delivery package from the link that Clay Tablet Technologies sends you. This is a .rar file, which is a zipped file that contains the following five folders:

<table>
<thead>
<tr>
<th>Folder Name</th>
<th>Description</th>
</tr>
</thead>
</table>
| **CTC Database** | The Connector database script files for the supported databases:  
- CTC_MsSQL_Database_.w.x_to_.y.z.sql, for Microsoft SQL databases;  
- CTC_MySQL_Database_.w.x_to_.y.z.sql, for MySQL databases;  
- CTC_Oracle_Database_.w.x_to_.y.z.sql, for Oracle databases;  
where .w.x_to_.y.z is the range of supported versions of the Connector for AEM for the database script. |
| **Clay Tablet Translation Connector-x.y.z-<datetimestamp>** | The installation package that you will install into your AEM system using the Package Manager tool.  
- **AEM version 6.1**: CLAY TABLET TRANSLATION CONNECTOR-x.y.z-yyyy-MMddkm, where x.y.z is the supported AEM version number, for example,  
  CLAY TABLET TRANSLATION CONNECTOR-2.4.0-2015-07211419.  
  **Note about upgrading from a previous version of the Connector with AEM 6.1:** There is a single package for both new installations and upgrades from previous installations. This redesigned package prevents overwriting your configuration settings while upgrading.  
- **Pre-6.1 versions of AEM**: com.clay-tablet.cqx.y.z.ctc.client-a.b-yyyy-MMddkm.zip, where x.y.z is the supported AEM version number and a.b is the current version of the Connector for AEM, for example com.clay-tablet.cqx5.6.1.ctc.client-2.4.0-2015-07211419.zip.  
  **Note about upgrading from a previous version of the Connector with a pre-6.1 version of AEM**: The package name for a new installation includes client, while a package name for updating an existing installation includes cupdate. The update package does not include the /etc/ctctranslation node, where configurations are stored. This prevents overwriting your configuration settings while upgrading. |
| **Freeway support package** | com.clay-tablet.cqx.x.ctc.client.addon.freewaysupport-y.z.zip, which is the Freeway-support add-on installation package that you will install into your AEM system using the Package Manager tool, where x.x is the supported AEM version number and y.z is the current version of the Connector for AEM. |
| **CTC Data** | The Connector Data folder zip archive, CTCData.zip. |
2. Before You Install

2.4 Creating a Clay Tablet Connector Database on your Database Server Instance

The Connector requires one of the following databases for its database engine:

- MySQL version 5.0 or higher
- Microsoft SQL Server version 2005 or higher
- Oracle 11g and 12c

**Note about upgrading from a previous version of the Connector:** If you are upgrading from a previous version of the Connector, please contact Clay Tablet Support for upgrade scripts and detailed instructions on upgrading your database. For details, see "How to Contact Clay Tablet Support" on page 1.

**Microsoft SQL Server instructions**

1. Create a database container, such as CTCTRANSITION.

2. Run the CTC_MsSQL_Database.sql script on your Microsoft SQL Server instance to create related tables.

**MySQL instructions**

1. Run the CTC_MySQL_Database.sql script on your MySQL server to create the CTCTranslation database and related tables.
2. Optional. You can create a separate SQL login for this database.

3. Ensure this Connector database is active and accessible.

**Oracle instructions**

1. Create an Oracle database, such as CTCTRANS, and set the character set support to multilingual. For detailed instructions, refer to the Oracle documentation. Oracle 10.2 documentation for this feature is available at: [http://docs.oracle.com/cd/B19306_01/server.102/b14225/ch6unicode.htm#i1006779](http://docs.oracle.com/cd/B19306_01/server.102/b14225/ch6unicode.htm#i1006779).

2. Create the database schema:

```sql
CREATE USER CTCTRANS IDENTIFIED BY xxxxxxxx DEFAULT TABLESPACE users TEMPORARY TABLESPACE temp;
```

Depending on your Oracle settings, you may need to use different default and temporary tablespaces.

3. Run the `CTC_Oracle_Database.sql` script on your Oracle database server to create the related tables.

---

### 2.5 Creating the Clay Tablet Connector Folders

This section describes how to create folders that Connector uses to store licensing information and translation data:

1. On your Adobe Experience Manager (AEM) server, navigate to the file system and create a folder called CTCdata.

2. Unzip the `CTCData.zip` archive folder from the delivery package you downloaded and unzipped, as described in "Downloading the Delivery Package" on page 12, and extract all the included folders into the target `CTCdata` folder. This creates the following four subfolders in the `CTCdata` folder:

<table>
<thead>
<tr>
<th>Sub-Folder</th>
<th>Folder Access Permissions</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>exports</td>
<td>Full</td>
<td>This folder will store cached Excel files that the Connector exports.</td>
</tr>
<tr>
<td>Sub-Folder</td>
<td>Folder Access Permissions</td>
<td>Description</td>
</tr>
<tr>
<td>------------</td>
<td>---------------------------</td>
<td>-------------</td>
</tr>
</tbody>
</table>
| files      | Full (apply to source and target sub-folders) | This folder has the following three sub-folders:  
- The source folder will contain generated XML files for translation.  
- The target folder will contain translated files received back from translation.  
- The update folder will contain manually updated translated files.  
  **Note:** Use this feature only if translation providers have edited XML files that were already returned into AEM, or if a file was not successfully inserted back into AEM.  
  By default, the Connector caches all the files for translation and all received translation files. To instruct the Connector not to cache these files, edit `/etc/ctcpipelineconfig/ctcTranslationPipes.xml` in CRX and follow the instructions in the comments in that file about how to comment out or enable particular steps in the Pipeline to meet your needs. |
| logs       | Full                      | This folder will be used by the Connector to store Connector log files. |
| projects   | Full                      | This folder contains information related to project creation. It prevents Connector project duplication when there are issues with database connectivity. |

3. Set the access permission for each folder according to the above table.
3 Integrating the Connector with AEM's Translation Integration Framework (AEM version 6.1 only)

This section describes how to integrate and configure AEM's translation integration feature (AEM version 6.1) with the Connector. For detailed information about this feature, refer to the AEM documentation, "Translating Content for Multilingual Sites," which is available at: http://docs.adobe.com/docs/en/aem/6-1/administer/sites/translation.html.

**Note:** For information on using this feature, refer to steps 4-6 in the Adobe documentation at the above link and "Using the AEM Translation Integration Framework to Manage Translations" in the *Clay Tablet Connector for Adobe Experience Manager User Guide, Special Edition for use with Lionbridge Freeway*.

To integrate the Connector with AEM's translation integration feature:

1. Unzip **ctc_data.zip**, and save it to a location on the file system that AEM can access.

2. Install the Connector package. For detailed instructions, see "Installing the Clay Tablet Connector and the Freeway Add-On" on page 25.

3. In AEM, create a cloud configuration that connects to the Connector. For detailed instructions, see "Creating an AEM Cloud Configuration for the Connector" on page 17.

4. In the Connector, configure the Connector for AEM's Translation Integration feature. For detailed instructions, see "Configuring the Connector for AEM Translation Integration" on page 18.

5. In the Connector, configure the translation provider and keys. For detailed instructions, see "Configuring LSP and Keys for AEM Translation Integration" on page 19.

6. In the Connector, configure the AEM team profile. For detailed instructions, see "Configuring an AEM Team Profile for AEM Translation Integration" on page 20.

7. In AEM, edit the settings for your Clay Tablet Connector cloud configuration. For detailed instructions, see "Editing Clay Tablet Cloud Configuration Settings" on page 20.

8. In AEM, you create a translation integration configuration and edit its settings. This specifies the AEM settings for translating your content. For detailed instructions, see "Creating a Translation Integration Configuration for the Connector" on page 22.

9. Optional. You can associate part of your website (a page and descendent pages) with Clay Tablet or with a specific Clay Tablet translation integration configuration. For detailed instructions, refer to "Configuring Pages for Translation" in the AEM documentation at: http://docs.adobe.com/docs/en/aem/6-1/administer/sites/translation/tc-tic.html.

10. Optional. You can specify which content to translate. For detailed instructions, refer to "Identifying Content to Translate" in the AEM documentation at: http://docs.adobe.com/docs/en/aem/6-1/administer/sites/translation/tc-rules.html.
3.1 Creating an AEM Cloud Configuration for the Connector

Within AEM's translation integration feature, you create a cloud configuration that connects to the Connector. Each configuration contains a set of Connector settings, which you will configure later. You can create multiple configurations. For example, you can create one configuration to send content to the Translation Queue, and you can create another configuration to send out content directly for translation. You can also create a different configuration for each translation provider.

To create a Connector configuration within AEM's translation integration feature:

1. Do one of the following to open the Adobe Cloud Services page:
   - In your Web browser, navigate to /etc/cloudservices.html in your AEM instance.
   - In the Touch-Optimized UI of AEM, click Tools > Operations > Cloud > Cloud Services in the AEM rail.

2. Create a cloud configuration that connects AEM to Clay Tablet:
   a. Scroll down to locate the Clay Tablet entry.
   b. Click Show Configurations.
   c. Click the plus icon to create a new configuration.

The Create Configuration page opens.
3 Integrating the Connector with AEM’s Translation Integration Framework (AEM version 6.1 only)

3.2 Configuring the Connector for AEM Translation Integration

d. In the Title field, enter a descriptive name to identify this configuration. For example, if you will use this configuration to send content directly to the Translation Queue, you can call this queue.

**Important:** Do not modify the value in the Parent Configuration field.

e. Save your changes and click OK.

The Clay Tablet Settings page opens for the configuration you just created.

f. Click the following link to open the Connector’s Configuration page: For Clay Tablet connector configuration, click here, as shown above.

For detailed instructions on configuring the Connector on the Configuration page for AEM’s translation integration feature, see "Configuring the Connector for AEM Translation Integration" on page 18.

### 3.2 Configuring the Connector for AEM Translation Integration

For each Connector configuration that you create within AEM’s translation integration feature, you configure the Connector on its Configuration page:

To configure the Connector:

1. If the Connector's Configuration page is not already open, then open it. Either:
   
   - Click the **click here** link in the Clay Tablet Settings page for the configuration you just created, as described at the end of "Creating an AEM Cloud Configuration for the Connector" on page 17.
   - In the Clay Tablet Connector rail, click **Admin Tools > Configuration**.

   The Configuration page opens.
2. Scroll down to the Translation Platform section.
   a. In the Platform Type list, select AWS Public Platform.
   b. In the Public Platform box, in the License ID field, enter one of the following:
      - the license uuid, sent by email
      - the license ID from the License_ID.txt file in the package you downloaded

   For more information about this section of the Configuration page, see "Translation Platform" on page 37.

3. In the JDBC SQL Connection section:
   a. Enter the JDBC URL and login credentials.
   b. Click Test to verify the JDBC connection and credentials.

   After testing, a message box indicates whether your configuration passed the test.

   For more information about this section of the Configuration page, see "JDBC SQL Connection" on page 39.

4. In the Folder and Permission section:
   a. In the Data Folder field, enter the path to the location where you extracted ctc_data.zip, in step 1 of "Integrating the Connector with AEM’s Translation Integration Framework (AEM version 6.1 only)" on page 16.
   b. Click Test to verify that this path is correct.

   After testing, a message box indicates whether your configuration passed the test.

   For more information about this section of the Configuration page, see "Folder and Permission" on page 41.

5. At the bottom of the page, click Save Configuration.

3.3 Configuring LSP and Keys for AEM Translation Integration

You configure the translation providers and Clay Tablet Platform for AEM translation integration. This supports selecting a translation provider from within the AEM translation framework.

To configure keys for AEM integration:

1. In the Clay Tablet Connector rail, click Admin Tools > LSP and Keys to open the LSP & Keys page.

2. Click Add.

3. In the LSP Name field, enter the name of the translation provider. For example, enter MT.

4. Next to the Account (key) dropdown list, click Retrieve.

5. Select the account license key for the translation provider.

6. Click Get key XML.

   The Source Key XML and the Platform Key XML boxes are populated.
The Source Key XML has the CMS address key.

The Platform Key XML box has the platform key, for accessing the Clay Tablet Platform.

7. Click Test beside the Source Key XML box.
   A message box indicates whether this key passed the test.

8. Click Test beside the Platform Key XML box.
   A message box indicates whether this key passed the test.

9. If testing passed, then click Add. This updates the Name, Source Account, and Platform Account columns in the LSP and Related Keys section at the top of the page.

For more information about the LSP & Keys page, see "Configuring Translation Providers and the CMS Address and Platform Keys" on page 70.

### 3.4 Configuring an AEM Team Profile for AEM Translation Integration

You configure an AEM team profile for AEM translation integration. This enables users in the team to access the AEM translation framework.

To configure keys for AEM integration:

1. In the Clay Tablet Connector rail, click Admin Tools > Team Profiles to open the Team Profiles page.

2. In the Name field, enter a name for this team profile.

3. In the Source Language column, select the check box for the source language.

4. In the Target Language column, select the check box(es) for the target language(s).

5. In the LSP column, select the MT check box.

6. In the AEM Users column, select the admin check box.

7. In the AEM Groups column, select the administrators check box.

8. Click Save.

For more information about the Team Profiles page, see "Configuring Team Profiles" on page 77.

### 3.5 Editing Clay Tablet Cloud Configuration Settings

In AEM, you edit the settings for your Clay Tablet Connector cloud configuration that you created in "Creating an AEM Cloud Configuration for the Connector" on page 17.

1. Do one of the following to return to the Adobe Cloud Services page:
   - In your Web browser, navigate to /etc/clouddservices.html in your AEM instance.
   - In the Touch-Optimized UI of AEM, click Tools > Operations > Cloud > Cloud Services in the AEM rail.
2. Under **Clay Tablet**, click **Show Configurations**.

3. Click the link for the configuration you created earlier.

4. At the top of the page that opens, click **Edit**.
   - The **Edit Component – Clay Tablet Connector Translator Settings** dialog box opens.

5. Enter values for the following settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Submission Type</strong></td>
<td>Select one of the following options:</td>
</tr>
<tr>
<td></td>
<td>▪ <strong>Add to queue</strong>: The Connector adds the specified pages to the Translation Queue.</td>
</tr>
<tr>
<td></td>
<td>In the Translation Queue, you can group items together by project, priority, and target language, and you can require additional approval before sending items out for translation.</td>
</tr>
<tr>
<td></td>
<td>▪ <strong>Send as a new job</strong>: The Connector immediately sends out the specified pages for translation as a new translation job, according to your company's routing rules and the options you specify below.</td>
</tr>
<tr>
<td><strong>LSP</strong></td>
<td>Select the translation provider for your translation jobs.</td>
</tr>
</tbody>
</table>

The remaining settings are relevant only if **Submission Type**, above, is **Send as a new job**. Specify the appropriate settings for your company.
### Setting Description

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
</table>
| Content Type          | You can tag the content in a translation job as a specific content type. Depending on your company’s configuration, the Clay Tablet Platform may send the content to a specific translation provider based on the content type. Select one of the following content types:  ■ Marketing  ■ Technical  ■ Legal  
  **Note:** You may see different content types if your company has configured custom content types. |
| Notification Emails   | Enter one or more email addresses that will receive notification when the content leaves AEM and when it returns to AEM. Use a comma to separate multiple email addresses. |
| In-country Reviewer   | Optional. This is generally the name of the localization reviewer, which is stored in the InCountryReviewer attribute in the XML sent to the translation provider. |

6. Click **OK** to save your changes and close the dialog box.

### 3.6 Creating a Translation Integration Configuration for the Connector

In AEM, you create a translation integration configuration and edit its settings. These are the AEM settings for how to translate your content. You can create multiple configurations, for example, if you have different translation providers for different sites, or if there are different kinds of content that you want to send out for translation for different sites.

To creating a translation integration configuration for the Connector:

1. Do one of the following to return to the **Adobe Cloud Services** page:
   - In the configuration page (described in the previous section), click the **Cloud Services** link in the top-left corner of the page.
3. Integrating the Connector with AEM’s Translation Integration Framework (AEM version 6.1 only)

   In your Web browser, navigate to `/etc/cloudservices.html` in your AEM instance.
   In the Touch-Optimized UI of AEM, click Tools > Operations > Cloud > Cloud Services in the AEM rail.

2. Under Translation Integration, click Show Configurations.

3. Click the plus sign beside Available Configurations to add a new configuration for Clay Tablet.

   The Create Configuration dialog box opens.

4. In the Title field, enter a descriptive title that includes both Clay Tablet and the site, for example, `clay-geometrix`, and then click Create.

   The Translation Config dialog box opens.
5. In the **Sites** tab:
   - For **Translation Workflow**, select **Human Translation**.
   - For **Translation Provider**, Select **Clay Tablet**. This name identifies the Connector in the AEM translation integration framework.

   **Note about Assets tab**: AEM extracts text associated with metadata into an XML file, which the Connector processes. Some translation providers, such as MT, may not support translating these files.

   For descriptions of the other fields and tabs, refer to "Creating a Translation Integration Configuration" in the AEM documentation at [http://docs.adobe.com/docs/en/aem/6-1/administer/sites/translation/tc-tic.html](http://docs.adobe.com/docs/en/aem/6-1/administer/sites/translation/tc-tic.html).

6. Click **OK** to close the dialog box.
4 Installing the Clay Tablet Connector and the Freeway Add-On

This section describes how to install the Connector installation package you downloaded earlier into your Adobe Experience Manager (AEM) system, as described in "Downloading the Delivery Package" on page 12. Before you install the Connector, verify that you have reviewed the system requirements and followed all the pre-installation procedures described in "Before You Install" on page 11.

Note: If you are installing the Connector in a clustered environment, see "Installing and Configuring the Connector in a Clustered Environment" on page 102.

To install the Connector into AEM:

1. Do one of the following:
   - In the Touch-Optimized UI of AEM, click Tools in the AEM rail. Then, in the Granite Operations section, click Packages.
   - In the Classic UI of AEM, scroll down and click Packages in the right pane.
   - In your Web browser, navigate to /crx/packmgr/index.jsp on your AEM instance.
   
   The CRX Package Manager opens.

2. Click Upload Package to upload the Clay Tablet Connector package to the AEM server.

3. Click the name of the package you uploaded earlier, and follow the on-screen instructions.

4. Repeat steps 2 and 3 to upload and install the Connector Freeway Support solution package using the Package Manager.

Note: If you are integrating the Connector with AEM's Translation Integration Framework (version 6.1 only), return to page 16, and follow the instructions.
5 Post-Installation Tasks

After installing the Connector, you complete the tasks below to verify that your installation was successful.

Important: The AEM admin user must perform the post-installation and configuration tasks for the first time after installation.

2. "Verifying that the Bundle and All Connector Components Are Active" on page 27.
3. "Verifying that the Connector Nodes are Installed" on page 29.
4. "Verifying that All Connector Nodes are Active" on page 30.
5. "Configuring Network Settings for a Firewall" on page 32. (Optional)

5.1 Configuring the Data Folder and Database Connection

After installing the Connector, you configure the database connection and the data folder, and then you restart the Clay Tablet bundle, so that you can verify that all Connector nodes are active.

1. Click Admin Tools > Configuration in the Clay Tablet Connector rail to open the Configuration page. For information on opening the Clay Tablet Connector rail, see "Configuring the Connector" on page 33.

2. In the JDBC SQL Connection section, configure the Connector’s database connection. For detailed instructions, see "JDBC SQL Connection" on page 39.

3. In the Folder and Permissions section, configure the Connector’s data folder. For detailed instructions, see "Folder and Permission" on page 41.
5.2 Verifying that the Bundle and All Connector Components Are Active

You must access the Apache Felix Web Console to verify that the bundle and all Connector components are installed and active:

<table>
<thead>
<tr>
<th>AEM Version</th>
<th>Number of Connector Components</th>
</tr>
</thead>
<tbody>
<tr>
<td>AEM 5.6.1</td>
<td>21</td>
</tr>
<tr>
<td>AEM 6.0</td>
<td>21</td>
</tr>
<tr>
<td>AEM 6.1</td>
<td>24</td>
</tr>
</tbody>
</table>

**Note:** The additional services are required in AEM 5.1 to support the Translation Integration Framework.

**Verifying the bundle**

1. In your browser, navigate to: /system/console/bundles on your AEM instance. The Adobe Experience Manager Web Console Bundles page opens.
2. In the Search box in the top-left corner of the page, type clay, and click Apply Filter. The Clay Tablet bundle is displayed.
3. Verify that the Clay Tablet bundle has active status.

**Verifying the Connector components**

1. In your browser, navigate to: /system/console/components on your AEM instance. The Adobe Experience Manager Web Console Components page opens. This page displays all components alphabetically, by name.
2. Scroll down to locate the Connector components, whose names all start with com.claytablet.
3. Verify that all the following Connector components are installed and active:
### Connector Component

<table>
<thead>
<tr>
<th>Connector Component</th>
<th>AEM 5.6.1</th>
<th>AEM 6.0</th>
<th>AEM 6.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>com.claytablet.cq5.ctctranslation.impl.CTCAlarmFieldsServiceImpl</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>com.claytablet.cq5.ctctranslation.impl.CTCAuthServiceImpl</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>com.claytablet.cq5.ctctranslation.impl.CTCConfigServiceImpl</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>com.claytablet.cq5.ctctranslation.impl.CTCDataServiceImpl</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>com.claytablet.cq5.ctctranslation.impl.CTCDownloadServiceImpl</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>

<tr>
<td>com.claytablet.cq5.ctctranslation.workflow.RolloutCTCQueueProcess</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>com.claytablet.cq5.ctctranslation.workflow.RolloutCTCTranslationProcess</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>com.claytablet.cq5.ctctranslation.translationapi.impl.config.DummyTranslationAdapterFactory</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
</tbody>
</table>
5 Post-Installation Tasks

## 5.3 Verifying that the Connector Nodes are Installed

After installing the Connector, you must access the CRXDE Lite interface to ensure that all 12 Connector nodes are installed.

1. Do one of the following:
   - In the Touch-Optimized UI of AEM, click **Tools** in the AEM rail. Then, in the **Granite Operations** section, click **CRXDE Lite**.
   - In the Classic UI of AEM, click **CRXDE Lite** in the right pane.
   - In your Web browser, navigate to `/crx/de/index.jsp` on your AEM instance.

   CRXDE opens.

2. In the navigation pane on the left, navigate to `/etc/ctctranslation`.

3. Verify that the following 12 nodes are present:
   - ctaddlanguages
   - ctconfig
   - ctconfig_ContentTypes
   - ctconfig_InitFields
   - ctcstatus
   - fields4trans
   - lspkeys
   - PageOptions
   - sidekickUI
   - teamprofiles
   - TransOptions
   - UI_ShowOptions
5.4 Verifying that All Connector Nodes are Active

After verifying that all Connector nodes are installed, you access the Apache Felix Web Console to verify that all Connector nodes are active.

1. In your browser, navigate to /system/console/bundles.
   The Adobe Experience Manager Web Console Bundles page opens.

2. Select OSGi > Services from the menu.
   The Adobe Experience Manager Web Console Services page opens.

3. In your browser, search this page for [com.claytablet.
   You should see the following Connector nodes running:

<table>
<thead>
<tr>
<th>Connector Node</th>
<th>AEM 5.6.1</th>
<th>AEM 6.0</th>
<th>AEM 6.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>[com.claytablet.cq5.ctctranslation.service.CTCAuthService]</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>[com.claytablet.cq5.ctctranslation.service.CTCConfigService]</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
</tbody>
</table>
## 5.4 Verifying that All Connector Nodes are Active

<table>
<thead>
<tr>
<th>Connector Node</th>
<th>AEM 5.6.1</th>
<th>AEM 6.0</th>
<th>AEM 6.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>[com.claytablet.cq5.ctctranslation.service.CTCDataService]</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>[com.claytablet.cq5.ctctranslation.service.CTCEventService]</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>[com.claytablet.cq5.ctctranslation.service.CTCJDBCPoolService], java.lang.Runnable</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>[com.claytablet.cq5.ctctranslation.service.CTCPageService]</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>[com.claytablet.cq5.ctctranslation.service.CTCPipeProcessService]</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>[com.claytablet.cq5.ctctranslation.service.CTLogService], java.lang.Runnable</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>[com.claytablet.testemail.HelloService]</td>
<td>✓</td>
<td></td>
<td></td>
</tr>
<tr>
<td>[com.claytablet.cq61.ctctranslation.CTCTranslationJobManager]</td>
<td>✓</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
5.5 Configuring Network Settings for a Firewall

Optional step. If you have a firewall, you must configure your ports so that the Connector can communicate with the Clay Tablet Platform. The Connector must be able to communicate with the Clay Tablet Platform by initiating the following outbound network connections:

<table>
<thead>
<tr>
<th>Protocol</th>
<th>Port Number</th>
<th>Description</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>HTTP</td>
<td>Port 80</td>
<td>For access to the Clay Tablet License Server</td>
<td><a href="http://license.clay-tablet.com">http://license.clay-tablet.com</a></td>
</tr>
<tr>
<td>HTTP</td>
<td>Port 80</td>
<td>For access to Amazon's AWS S3 XML namespace and XSD file</td>
<td><a href="http://s3.amazonaws.com">http://s3.amazonaws.com</a></td>
</tr>
<tr>
<td>HTTP</td>
<td>Port 80</td>
<td>For access to Amazon's AWS SQS XML namespace and XSD file</td>
<td><a href="http://queue.amazonaws.com">http://queue.amazonaws.com</a></td>
</tr>
<tr>
<td>HTTPS</td>
<td>Port 443</td>
<td>For secure access to Amazon's AWS S3 service</td>
<td><a href="https://s3.amazonaws.com">https://s3.amazonaws.com</a></td>
</tr>
<tr>
<td>HTTPS</td>
<td>Port 443</td>
<td>For secure access to Amazon's AWS SQS service</td>
<td><a href="https://queue.amazonaws.com">https://queue.amazonaws.com</a></td>
</tr>
</tbody>
</table>
6 Configuring the Connector

You configure the Connector for AEM mostly via the Clay Tablet Connector rail, as described below.

1. Log in to AEM with the admin account to start configuring the Connector.

2. Do one of the following:
   - In the Touch-Optimized UI of AEM 6.0 or higher, click Tools > Clay Tablet Connector in the AEM rail.
   - In the Touch-Optimized UI of AEM, click Tools in the AEM rail. Then, in the Granite Operations section, click Clay Tablet Connector.
   - In the Classic UI of AEM, scroll down and click Clay Tablet Connector in the right pane.
   - In your Web browser, navigate to /content/ctctranslation/status.html on your AEM instance. The Translation Status page opens.

3. In the Clay Tablet Connector rail, click Admin Tools.
   This displays the Admin Tools menu options. You can perform most Connector configuration changes using these tools.
Note: After the Connector is installed, you must start configuring the Connector by selecting **Admin Tools > Configuration**. If you do not begin with this, subsequent configuration options will not be available. For details, see "Configuring Connector Global Settings" on page 35.

The following menu options are available:

<table>
<thead>
<tr>
<th>Menu Option</th>
<th>Purpose</th>
<th>For Details, See...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Configuration</td>
<td>Configure Connector global settings, including translation options.</td>
<td>&quot;Configuring Connector Global Settings&quot; on page 35</td>
</tr>
<tr>
<td>Language Mapping</td>
<td>Configure the language branches in the Web site structure where the Connector returns translated content, and configure the language lists displayed in Sidekick and the Bulk Translation wizard.</td>
<td>&quot;Configuring Connector Languages&quot; on page 61</td>
</tr>
<tr>
<td>Component Mapping</td>
<td>Configure the types of components and fields that the Connector can send out for translation when you send out content for translation.</td>
<td>&quot;Configuring which Components and Properties to Send Out for Translation&quot; on page 65</td>
</tr>
<tr>
<td>LSP and Keys</td>
<td>Configure the translation provider and the CMS address and platform keys.</td>
<td>&quot;Configuring Translation Providers and the CMS Address and Platform Keys&quot; on page 70</td>
</tr>
<tr>
<td>Search Agents</td>
<td>Configure search agents to collect pages for translation in the Bulk Translation wizard.</td>
<td>&quot;Configuring Connector Search Agents&quot; on page 75</td>
</tr>
<tr>
<td>Team Profiles</td>
<td>Define sets of Connector users who are allowed to send content out for translation from the specified source languages, to the specified source languages, using the specified translation providers.</td>
<td>&quot;Configuring Team Profiles&quot; on page 77</td>
</tr>
</tbody>
</table>

4. The following configuration steps are optional:

<table>
<thead>
<tr>
<th>Configuration</th>
<th>For Details, See...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Configure the frequency that the Connector checks for processing, sending, and receiving translations.</td>
<td>&quot;Configuring the Service Components&quot; on page 78</td>
</tr>
<tr>
<td>Configure custom content types, using CRXDE Lite.</td>
<td>&quot;Configuring Custom Content Types&quot; on page 79</td>
</tr>
</tbody>
</table>
### 6.1 Configuring Connector Global Settings

To configure Connector global settings, click **Admin Tools > Configuration** in the Clay Tablet Connector rail to open the **Configuration** page. For information on opening the Clay Tablet Connector rail, see "Configuring the Connector" on page 33.

The configuration options are organized into the following sections:

<table>
<thead>
<tr>
<th>Configuration Section</th>
<th>Purpose</th>
<th>For Details, See...</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;CQ Server URL&quot; on page 36</td>
<td>Specify the base URL that is used to generate a full page review URL.</td>
<td></td>
</tr>
<tr>
<td>&quot;Network Configuration&quot; on page 36</td>
<td>Specify the network configuration details for proxy server implementations.</td>
<td></td>
</tr>
<tr>
<td>&quot;Translation Platform&quot; on page 37</td>
<td>Configure the Clay Tablet Platform, which receives and routes content between the Connector and translation providers.</td>
<td></td>
</tr>
<tr>
<td>&quot;JDBC SQL Connection&quot; on page 39</td>
<td>Configure the JDBC SQL connection to the Connector database. <strong>Note:</strong> In general, you configure the database connection immediately after installation.</td>
<td></td>
</tr>
<tr>
<td>&quot;Folder and Permission&quot; on page 41</td>
<td>Configure the Connector data folder and its permissions. <strong>Note:</strong> In general, you configure the Connector data folder immediately after installation.</td>
<td></td>
</tr>
<tr>
<td>&quot;Translation Setting&quot; on page 42</td>
<td>Configure translation-specific options.</td>
<td></td>
</tr>
<tr>
<td>&quot;Mail Server Settings&quot; on page 45</td>
<td>Specify the email settings for notification emails that the Connector can send.</td>
<td></td>
</tr>
</tbody>
</table>
Configuration Section | Purpose
--- | ---
"Log Service" on page 46 | Specify the Connector log settings.
"Agent Services" on page 46 | Configure the settings for the ctcPrepareService and ctcUploadService services.
"UI and Default Settings" on page 47 | Specify the default user interface settings that are displayed to users.

When you are done, you can perform the actions described below. The corresponding buttons are displayed at the bottom of the Configuration page:

- To export your configuration settings (excluding the translation options), as an XML file, click **Export Configuration**. The Connector downloads the file.
- To export your translation options as an XML file, click **Export Translation Options**. The Connector downloads the file.
- To save your changes to the Configuration page, click **Save Configuration**.

### 6.1.1 CQ Server URL

The **CQ Server URL** section of the **Configuration** page specifies the base URL that is used to generate a full page review URL.

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adobe AEM Base URL</td>
<td>This is the base URL that is used to generate a full page review URL. For example, if the URL of the AEM server is <code>http://www.xxx.com:4502</code>, then the full URL of page <code>/content/www/product</code> is <code>http://www.xxx.com:4502/content/www/product.html</code> in the file for translation.</td>
</tr>
</tbody>
</table>

### 6.1.2 Network Configuration

The **Network Configuration** section of the **Configuration** page specifies the network configuration details for proxy server implementations.
### Configuration Option

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use Proxy Server</td>
<td>Indicates whether the Connector uses a proxy server. If this is No, the other settings in this section are not required.</td>
</tr>
<tr>
<td>Proxy Host</td>
<td>The IP address or domain name for the proxy server.</td>
</tr>
<tr>
<td>Proxy Port</td>
<td>The port number for the proxy server.</td>
</tr>
<tr>
<td>Need Authentication</td>
<td>Indicates whether authentication is required to access the proxy server. If this is No, the remaining settings in this section are not required.</td>
</tr>
<tr>
<td>[Proxy Auth] User</td>
<td>The user name for authentication to the proxy server.</td>
</tr>
<tr>
<td>[Proxy Auth] Password</td>
<td>The password for authentication to the proxy server.</td>
</tr>
<tr>
<td>[Proxy Auth] Domain</td>
<td>The domain for authentication to the proxy server.</td>
</tr>
</tbody>
</table>

To verify the network configuration and credentials for a proxy server, click the **Test** button. After testing, a message box indicates whether your configuration passed the test.

### 6.1.3 Translation Platform

The **Translation Platform** section of the **Configuration** page configures the Clay Tablet Platform, which receives and routes content between the Connector and translation providers.
### Platform Type

This indicates which type of Clay Tablet Platform your installation uses. This is one of the following:

- **AWS Public Platform**: If your company uses the Clay Tablet Platform hosted on AWS (most common installation), select this.
- **On Premise Platform**: If your company uses a Clay Tablet Platform that it hosts and manages, select this.

### Internal Platform

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>On Premise Server URL</strong></td>
<td>The URL of the server that runs the Clay Tablet Web Service (CTWS). Relevant only if On Premise Platform was selected in Platform Type, above.</td>
</tr>
<tr>
<td><strong>Source Key XML</strong></td>
<td>Relevant only if On Premise Platform was selected in Platform Type, above. This file contains the CMS address key.</td>
</tr>
<tr>
<td><strong>Platform Key XML</strong></td>
<td>Relevant only if On Premise Platform was selected in Platform Type, above. This is the Platform key, which is relevant for one translation provider. <strong>Note</strong>: When your company uses the Clay Tablet On Premise Platform, which is hosted on your company's premises, the Connector does not support multiple translation providers.</td>
</tr>
</tbody>
</table>
## Configuration Option

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Test</td>
<td>Relevant only if On Premise Platform was selected in Platform Type, above. Click this to test the keys in the Source Key XML and Platform Key XML boxes, above. After testing, a message box indicates whether the keys passed the test.</td>
</tr>
</tbody>
</table>

### Public Platform

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>License ID</td>
<td>Relevant only if AWS Public Platform was selected in Platform Type, above. Enter the license ID from the License_ID.txt file in the package you downloaded. For details, see &quot;Downloading the Delivery Package&quot; on page 12.</td>
</tr>
</tbody>
</table>

### Freeway Config

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Freeway Server</td>
<td>The URL for the Freeway server.</td>
</tr>
<tr>
<td>Login Name</td>
<td>The login name for the Freeway server.</td>
</tr>
<tr>
<td>Login Password</td>
<td>The login password for the Freeway server.</td>
</tr>
<tr>
<td>Test</td>
<td>Click this to test the Freeway login credentials, above. After testing, a message box indicates whether the credentials passed the test.</td>
</tr>
</tbody>
</table>

### Freeway Analysis Codes

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Require Value 1</td>
<td>If this check box is selected, the user must specify the first analysis code configured for your company (for example, region) when sending content to Freeway.</td>
</tr>
<tr>
<td>Require Value 2</td>
<td>If this check box is selected, the user must specify the first analysis code configured for your company (for example, department) when sending content to Freeway.</td>
</tr>
<tr>
<td>Require Value 3</td>
<td>If this check box is selected, the user must specify the first analysis code configured for your company (for example, priority) when sending content to Freeway.</td>
</tr>
</tbody>
</table>

**Warning:** This configuration is required for full integration between the Connector and Freeway. Otherwise, the Connector cannot retrieve and display analysis code options, and the user cannot specify analysis codes for projects submitted to Freeway. However, even without this configuration, the Connector can still send submitted content to Freeway.

### 6.1.4 JDBC SQL Connection

The JDBC SQL Connection section of the Configuration page configures the JDBC SQL connection to the Connector database.
The options in this section configure the JDBC SQL connection to the Connector database. The Connector supports the MySQL, Microsoft SQL Server, and Oracle databases.

**Note:** The name of the Connector database is either `ctctranslation` or `CTCTRANSLATION`. For details, refer to "Creating a Clay Tablet Connector Database on your Database Server Instance" on page 13.

**Important:** Every AEM server with the Connector installed needs its own Connector database. Mirrored or load-balanced servers can point to the same Connector database.

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| JDBC SQL Driver class | Enter the appropriate configuration parameter for your database implementation:  
  - For Microsoft SQL Server, enter:  
    `com.microsoft.sqlserver.jdbc.SQLServerDriver`.  
  - For MySQL, enter: `com.mysql.jdbc.Driver`.  
  - For Oracle, enter: `oracle.jdbc.driver.OracleDriver`. |
| JDBC Connection URL | Enter the appropriate configuration parameter for your database implementation:  
  - For Microsoft SQL Server, the URL should look like:  
    `jdbc:sqlserver://192.168.1.66:1433;databaseName=ctctranslation;`.  
  - For MySQL Server, the URL should look like:  
  - For Oracle, the URL should look like:  
| Login name | The name for logging in to the SQL database. |
| Login password | The password for logging in to the SQL database. |

**General notes:** In the examples above, 192.168.1.66 is the IP address of the database server. Alternatively, you can enter the domain name of the database server.

**Notes for MySQL users:** Ensure that `characterEncoding=UTF-8` is configured for MySQL. 3306 is the default port of MySQL Server. If your database server uses a different port, change the port number in the example to match your port number.
6.1.5 Folder and Permission

The Folder and Permission section of the Configuration page configures the Connector data folder and its permissions.

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data Folder</td>
<td>This is the path to the folder you created, where Connector will store translation data. For details, see &quot;Creating the Clay Tablet Connector Folders&quot; on page 14.</td>
</tr>
<tr>
<td></td>
<td>- For Microsoft Windows, the path must end with \, for example, c:\ctcdata\.</td>
</tr>
<tr>
<td></td>
<td>- For UNIX, including Linux, or Mac, the path must end with /, for example, /usr/share/ctcdata/.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> The files and logs subfolders should have full access permissions for Java processes.</td>
</tr>
<tr>
<td></td>
<td>- To verify that this path is correct, click the Test button. After testing, a message box indicates whether your configuration passed the test.</td>
</tr>
<tr>
<td>[Translation User] CQ5 Group ID</td>
<td>Select the ID of the Adobe CQ group whose members are allowed to submit content only to the Translation Queue. The members cannot send out content for translation.</td>
</tr>
<tr>
<td>[Translation Submit] CQ5 Group ID</td>
<td>Select the ID of the Adobe CQ group whose members are allowed to submit translation jobs to the Translation Queue and send content out for translation.</td>
</tr>
</tbody>
</table>
### 6.1.6 Translation Setting

The **Translation Setting** section of the **Configuration** page configures translation-specific options.

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Translation Admin] CQ5 Group ID</td>
<td>Select the ID of the Adobe CQ group whose members are allowed to send out translation jobs for translation, configure the Connector, and remove completed translation jobs and statuses.</td>
</tr>
<tr>
<td>[Job Quote] Can be approved/rejected by</td>
<td>Select the user group whose members are allowed to approve or reject translation job quotes.</td>
</tr>
</tbody>
</table>

**Configuration Option** | **Description**                                                                                                                                 |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Project Identifier      | The project name, as it will be displayed in the Translation Status page. If you leave this field blank, the project name is concatenated with the username and the date and time stamps in translation projects your company submits for translation.  
**Recommendation:** Enter your company name as the project identifier. |
### Configuration Option

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| MAX #pages per File  | This setting determines the maximum number of AEM pages that the Connector packs into a single XML file for translation. You can adjust the number to better suit your translation requirements.  
**Note:** Translation providers translate an entire XML file before returning it. Therefore, it takes more time to translate an XML file with more pages packed into it than an XML file with fewer pages packed into it. Specifying a lower maximum number of pages per file generally results in a faster turnaround time.  
The default value is 100, which means the Connector will package content from 100 AEM pages into a single XML file.  
**Recommendation:** Discuss this with your translation provider. |
| Catch rollout pages to [Rollout] Queue | Select this option to enable users to send content to the Translation Queue when using AEM’s MSM Rollout functionality. If this check box is selected, when users roll out pages, the Connector automatically sends content to the Translation Queue.  
**Note:** Alternatively, you can use the CTCRolloutTranslation workflow to enable this functionality. For details, see "Viewing the Rollout Workflow" on page 89. For information about when to use which configuration method, see "Configuring the Rollout Feature" on page 80. |
| Remove control characters | Some control characters, such as 0x10 and 0x13, will cause an XML file to be invalid. However, some translation providers and translation management systems may not be able to handle control characters. This option instructs the Connector to automatically remove all control (non-printing) characters (0x00-0x1F) from an XML file before sending it out for translation. |
| Save translation to Local TM | This setting determines whether the translated content is stored at a property level in the local TM (translation memory). You can view these properties in CRXDE Lite.  
- If this check box is selected, the translated content is stored at a property level in the local TM.  
- If this check box is not selected, the translated content is not stored at a property level in the local TM. |
<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| Language Conversion (URL Reference)       | For fields in AEM pages that contain only internal URLs, the Connector can automatically find the referring target URL and exclude this field from the page translation process.  
  - Select this check box if the entire field is a URL reference, for example, /content/www/en/us/products, in a field of a page that will be translated to French, and there is no `<a>` link tag. In this scenario, the Connector treats this field as a URL reference field, and it does not send out this field for translation. It automatically converts the URL to /content/www/fr/fr/products for the French version of the content.  
  - Clear this check box if you want the Connector to send out this field for translation. |
| Language Conversion (Content Link)        | For fields in AEM pages that contain internal links, the Connector can automatically convert these internal links to point to the corresponding pages in the target language.  
  - Select this check box to convert the link to the corresponding target page. For example, if you are translating English to French, a link that was previously to another English page will now point at the corresponding French page.  
  - Clear this check box to maintain the link to the page in the source language. For example, if you are translating English to French, a link that was previously to another English page will still point at the original English page. |
<p>| Send email notification when a page translation has been sent out | Select this check box if you want the Connector to send an email notification when it sends out a page for translation. |
| Email addresses for receiving &quot;Send-Out&quot; notification | Comma separated email addresses that will receive notification emails when the Connector sends out a page for translation. |
| Send email notification when a page translation has been completed | Select this check box if you want the Connector to send an email notification when a page translation has been completed. |</p>
<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Email addresses for receiving &quot;Completed&quot; notification</td>
<td>Comma separated email addresses that will receive notification emails when a page translation has been completed.</td>
</tr>
</tbody>
</table>

Note about email notifications: The above settings are global, so the Connector will send email notifications to these addresses for all translation projects. In the Connector, users can also add email notifications on a project basis. For details, refer to the Clay Tablet Connector for Adobe Experience Manager User Guide, Special Edition for use with Lionbridge Freeway.

6.1.7 Mail Server Settings

The Mail Server Settings section of the Configuration page specifies the mail-server settings for notification emails that the Connector can send.

![Mail Server Settings](image)

This section is required if you configured the Connector to send notification emails. For details, see “Translation Setting” on page 42.

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SMTP Host</td>
<td>The IP address or domain name of your SMTP server.</td>
</tr>
<tr>
<td>SMTP Port</td>
<td>The port used by your SMTP service.</td>
</tr>
<tr>
<td>Need Authentication</td>
<td>Indicates whether the SMTP server needs authentication. If necessary, contact your network administrator for this information.</td>
</tr>
<tr>
<td>[SMTP Auth] User</td>
<td>The login name or account if your SMTP server needs authentication.</td>
</tr>
<tr>
<td>Configuration Option</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-------------</td>
</tr>
<tr>
<td>[SMTP Auth] Password</td>
<td>The password to log in to your SMTP server if it needs authentication.</td>
</tr>
<tr>
<td>SMTP STARTTLS</td>
<td>Indicates whether your SMTP server supports the StartTLS protocol. If necessary, contact your network administrator for this information.</td>
</tr>
<tr>
<td>Notification email from</td>
<td>The email address from which Connector notification emails will be sent. If this is not specified, the default email address is <a href="mailto:ctcnotification@clay-tablet.com">ctcnotification@clay-tablet.com</a>.</td>
</tr>
</tbody>
</table>

To verify the email settings, click the **Test** button. After testing, a message box indicates whether your configuration passed the test.

### 6.1.8 Log Service

The **Log Service** section of the **Configuration** page specifies Connector log settings.

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Log Level</td>
<td>There are three levels of logging: <strong>Info</strong>, <strong>Debug</strong>, and <strong>Trace</strong>. <strong>Recommendation</strong>: Initially set the log level to <strong>Debug</strong>, since this level of logging has all the details of the Connector translation process. This level of detail is required for Clay Tablet Support to assist you with any implementation issues. After the end-to-end translation process is running smoothly, you can change this to <strong>Info</strong>, so that only warnings and errors are logged.</td>
</tr>
<tr>
<td>Log Archive (Days)</td>
<td>By default, the Connector maintains 15 days of logs.</td>
</tr>
</tbody>
</table>

### 6.1.9 Agent Services

The **Agent Services** section of the **Configuration** page configures the settings for the ctcPrepareService and ctcUploadService services.
6 Configuring the Connector

6.1 Configuring Connector Global Settings

<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| Speed                | You can choose a level from 1 to 20 to adjust the load the `ctcPrepareService` and `ctcUploadService` agent services present to your servers. Setting 1 is very fast and therefore more resource intensive. The default value is 1 (fastest). Based on CTT testing, this setting will push CPU usage to 60% on average. You can monitor your server performance, and if the Connector uses too many server resources, you may need to adjust the speed level.  
  **Note:** This speed setting affects all Clay Tablet agent services. |
| Multiple Threads     | This is the maximum number of threads that the Connector can use for the Clay Tablet JDBC pool, and to concurrently prepare, send, download, and return translations to AEM. It is between 1 and 20. |

### 6.1.10 UI and Default Settings

The **UI and Default Settings** section of the **Configuration** page specifies the default user interface settings that are displayed to users.
<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Translation on Sidekick** | This setting determines the user interface displayed when clicking **CTC Translation** on the **Page** tab of the Sidekick. Some companies prefer a simplified process where users cannot choose advanced translation options, while others prefer to empower their content editors to set various parameters each time they send out content. For instance contributors can choose to ensure source content is not overwritten during the translation process, as it pertains to MSM rollout processes. The following options are available:  
  - **Simple UI**: Users can submit content to the Translation Queue. All options are displayed in a single dialog box. Advanced translation options are *not* displayed.  
  - **Simple UI with all options**: Users can submit content to the Translation Queue. All options are displayed in a single dialog box. Advanced translation options *are* displayed.  
  - **Wizard**: Users can either submit content to the Translation Queue or send content out for translation. Options are displayed in a two-page wizard. Advanced translation options are *not* displayed. This is the default setting.  
  - **Wizard with all options**: Users can either submit content to the Translation Queue or send content out for translation. Options are displayed in a two-page wizard. Advanced translation options *are* displayed. This is the default setting.  
  For more information about these options, including screen captures of the user interfaces displayed in Sidekick, see "**Sidekick Options**" on page 51. |
| **Show options on Bulk UI** | This setting determines whether to display the Options page in the Bulk Translation wizard. The Options page enables users to change the following options:  
  - **Use Local TM**  
  - **Target pages have content in source language**  
  - **Only translate content from locked components**  
  - **Unlock the component after translated content come back**  
  - **Allow translate content from Not-Sync components**  
  These options are described below. |
<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Translation Default Settings** | The following sub-section determines the default settings of these options when they are displayed in the Sidekick, Bulk Translation wizard, and the Translation Queue. For all these options:  
- If a check box is selected, then the default value of this option is selected.  
- If a check box is cleared, then the default value of this option is cleared.  
Many of the options in this section are related to AEM's MSM (Multi Site Manager) and Rollout features. For a description of these features and related concepts, as well as integration with the Connector, see "MSM and Rollout Settings" on page 59  
**Note:** Depending on your company's configuration, users may not be able to change these values. For example, if the Show options on Bulk UI check box, described above, is not selected, then users cannot change these settings in the Bulk Translation wizard. In that case, this section determines the default value of these settings. |
| **Use Local TM** | This feature determines whether to check each component in the source version of the item for any content changes, and send only changed components out for translation. If a component was previously translated and it has not changed, then the Connector does not send it for translation again: Instead, it uses the stored translation. This feature reduces the quantity of content that the Connector sends to translation providers, which reduces your cost. However, it needs the Connector translation backup data, and it increases the Connector processing time before sending out the items for translation.  
- If this check box is selected, the Connector checks whether content was already translated before sending it out for translation.  
- If this check box is cleared, the Connector sends out content for translation without checking whether it has already been translated. |
### Configuration Option

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Target pages have content in source language</strong></td>
</tr>
</tbody>
</table>
| This option is relevant when the target pages are MSM (Multi Site Manager) live copy pages, which means that AEM automatically updates a target page when the corresponding source page changes. It prevents the Connector from overwriting unique source content that already exists in the target pages.  
This is useful when you are sending a page for translation that has been used in the past to push content to other pages, and includes target page content which has been changed, for example, regionalized. In this scenario you do not want to overwrite the regionalized content as the translation process occurs. Select this option when you **do not** want the Connector to overwrite components in the target pages that include regionalized content with the newly translated content.  
- If this check box is selected, the Connector **does not** overwrite unique source content that already exists in the target pages.  
- If this check box is cleared, the Connector **does** overwrite unique source content that already exists in the target pages. |
| **Only translate content from locked components** |
| This option enables users to send out only content from locked components for translation.  
- If this check box is selected, users can send out content for translation only if it is from a locked component.  
- If this check box is cleared, users can send out content for translation whether or not it is from a locked component.  
**Note:** Locked components have an inheritance relationship between a source Blueprint page and the connected live copy page. When sending content for translation using Sidekick, users can choose whether to send for translation the content from locked components, which is inherited from a Blueprint component. This is useful if, for example, the page has both global and regional information and you only want to translate (replace) the global content that is created via a Blueprint page. In this scenario, suppose that the regional content on the page is manually translated in house, and that it has not changed. You would not want to tamper with it. However, using the same scenario, the global content from head office *has* changed and needs translation. You would select this check box to separate the content and localize only the new, inherited content.  
**Note about Blueprint pages:** If the **Pickup Content From Blueprint Pages** setting is specified, then the Connector always acts as though this option is selected, even if it is not selected. This occurs because only content from locked components are rolled out from Blueprint pages to Livecopy pages. For more information, see "UI and Default Settings" on page 47. |
<table>
<thead>
<tr>
<th>Configuration Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unlock the component after translated content comeback</td>
<td>This option automatically unlocks a component after translated content returns. Suppose you send a page for translation that has been used previously to push content to other pages, and it includes target page content that has been changed, for example, regionalized. In this scenario you do not want to overwrite the regionalized content as the translation process occurs, so you select the <strong>Target Pages Have Content In Source Language</strong> option, which prevents the Connector from overwriting those regionalized target pages with newly translated content. If following that translation, you want to treat the resulting translations as regional, and you no longer want to inherit content from the Blueprint pages, select this check box. <strong>Warning:</strong> This breaks the inheritance between the component and its Blueprint page, so that it no longer inherits new content. However, you can use the <code>CTCRestoreOriginalSync</code> workflow to relock the component and recreate the inheritance. For details, see &quot;Viewing the Restore Original Sync Workflow&quot; on page 90.</td>
</tr>
<tr>
<td>Allow translated content from Not-Sync components</td>
<td>This option enables users to send content for translation even if it is not synchronized. This means it <em>does not</em> have a relationship to a Blueprint page, so it cannot be synchronized with it. This can happen if you are not using the MSM (Multi Site Manager) feature of AEM, or if this is a page with regionalized content that does not inherit content from a Blueprint page. If this check box is selected, users <em>can</em> send out content for translation if it does not have a relationship to a Blueprint page. If this check box is cleared, users <em>cannot</em> send out content for translation if it does not have a relationship to a Blueprint page. <strong>Note about Blueprint pages:</strong> If the <strong>Pickup Content From Blueprint Pages</strong> setting is specified, then the Connector always acts as though this option is selected, even when it is not. This occurs because only content from locked components is rolled out from Blueprint pages to Livecopy pages. For more information, see &quot;Enabling Content Collection from Blueprint Pages&quot; on page 84.</td>
</tr>
</tbody>
</table>

### 6.1.10.1 Sidekick Options

The following table describes the possible values for the **Translation on Sidekick** option in the UI and Default Settings section of the Configuration page. This page is described in "UI and Default Settings" on page 47.
<table>
<thead>
<tr>
<th>Translation on Sidekick Value</th>
<th>Where User Can Submit Content</th>
<th>User Interface</th>
<th>Advanced Translation Options Available</th>
</tr>
</thead>
<tbody>
<tr>
<td>Simple UI</td>
<td>Translation Queue only</td>
<td>dialog box</td>
<td></td>
</tr>
<tr>
<td>Simple UI with all options</td>
<td>Translation Queue only</td>
<td>dialog box</td>
<td>✓</td>
</tr>
<tr>
<td>Wizard</td>
<td>Translation Queue or directly to translation</td>
<td>two-page wizard</td>
<td></td>
</tr>
<tr>
<td>Wizard with all options</td>
<td>Translation Queue or directly to translation</td>
<td>two-page wizard</td>
<td>✓</td>
</tr>
</tbody>
</table>

Screen captures of each option follow. For a detailed description of the translation interface within Sidekick, refer to the Clay Tablet Connector for Adobe Experience Manager User Guide, Special Edition for use with Lionbridge Freeway.

**Simple UI**

This option enables users to submit content to the Translation Queue. It does not display advanced translation options.
Simple UI with options

This option enables users to submit content to the Translation Queue. It displays advanced translation options.
Wizard

This option enables users to send content either to the Translation Queue or directly out for translation. It does not display advanced translation options. It is a two-page wizard.

**Note:** You can configure whether by default the wizard sends content to the Translation Queue or directly out for translation. For details, see "Configuring the default value of the Submit Translation dropdown list in the Sidekick wizard" on page 58.
6 Configuring the Connector

6.1 Configuring Connector Global Settings

![Configuration Screen]

- **Translation scope**:
  - Current page
  - All sub pages
  - Current page and all sub pages

- **Source language**:
  - US_EN

- **Target language(s)**:
<table>
<thead>
<tr>
<th>Language</th>
<th>CT language code</th>
</tr>
</thead>
<tbody>
<tr>
<td>US_EN</td>
<td>en-US</td>
</tr>
<tr>
<td>FR_FR</td>
<td>fr-FR</td>
</tr>
<tr>
<td>DE_DE</td>
<td>de-DE</td>
</tr>
<tr>
<td>ES_ES</td>
<td>es-ES</td>
</tr>
<tr>
<td>IT_IT</td>
<td>it-IT</td>
</tr>
<tr>
<td>JA_JP</td>
<td>ja-JP</td>
</tr>
<tr>
<td>ZH_CN</td>
<td>zh-CN</td>
</tr>
<tr>
<td>SL_SK</td>
<td>sl-LK</td>
</tr>
<tr>
<td>NL_NL</td>
<td>nl-NL</td>
</tr>
<tr>
<td>TR_TR</td>
<td>tr-TR</td>
</tr>
<tr>
<td>HU_HU</td>
<td>hu-HU</td>
</tr>
</tbody>
</table>
Wizard with options

This option enables users to send content either to the Translation Queue or directly out for translation. It displays advanced translation options. It is a two-page wizard.

**Note:** You can configure whether by default the wizard sends content to the Translation Queue or directly out for translation. For details, see "Configuring the default value of the Submit Translation dropdown list in the Sidekick wizard" on page **58**.
Configuring the default value of the Submit Translation dropdown list in the Sidekick wizard

You can now configure the default value of the Submit Translation dropdown list in the Sidekick wizard.
To change the default from Add to queue to Send as a new job:
   a. In CRX, edit the /etc/ctctranslation/sidekickUI node.
   b. Add a new property named skOptionDefaultSubmitType, of type String, with value job.
   c. Save all.
   d. On the page with Sidekick, press Ctrl and F5 to delete the client-side cache.
      The default is now Send as a new job.

To hide the Add to queue value:
   a. In CRX, edit the /etc/ctctranslation/sidekickUI node.
   b. Add a new property named skOptionHideSubmitType, of type String, with value queue, which is a multi-value property.
   c. Save all.
   d. On the page with Sidekick, press Ctrl and F5 to delete the client-side cache.
      The Add to queue option is no longer displayed.

6.1.10.2 MSM and Rollout Settings

AEM's MSM and the Rollout Process

AEM includes the powerful Multi Site Manager (MSM), which facilitates managing multiple versions of web sites. The versions may be region specific, for example, a car company may have a different English version of its web site for each English-speaking country where it sells cars. Typically, one version of the site is considered the "source" site. Content in each target website may have different kinds of relationships to the version in the "source" site:

- Some content may be common to all web sites, such as the car company's history.
- Some content may be a mix of common and specific. For example, the company may sell the same cars in many countries, but the cars may have slightly different features in some countries, depending on local regulations.
- Some content may be specific to a specific version of the site, such as information about car dealerships in a particular country.

Rollout is a process that propagates the changes made from the source (blueprint) to the target (live copy). When you roll out a site, AEM copies the blueprint (source) to the live copy (target). If the components are locked, then whenever the source content changes, AEM automatically updates the target content.

The following AEM concepts are helpful to understanding MSM and rollout:

<table>
<thead>
<tr>
<th>Concept</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blueprint</td>
<td>A source template for multiple pages, which can be rolled out.</td>
</tr>
</tbody>
</table>
### Concept

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Live copy</strong></td>
</tr>
<tr>
<td><strong>Locked</strong></td>
</tr>
<tr>
<td><strong>Unlocked</strong></td>
</tr>
</tbody>
</table>

For more information about these features and the rollout process, refer to the AEM user documentation, available at:

- [http://dev.day.com/docs/en/aem/6-0/administer/sites/multi-site-manager/msm-sync.html](http://dev.day.com/docs/en/aem/6-0/administer/sites/multi-site-manager/msm-sync.html) (AEM 6.0)

### Why Integrate the Connector with Rollout

The Connector extends the MSM functionality by adding the translation component to the rollout feature. This facilitates using rollout not only to manage multiple region-specific sites, but also to manage multiple language-specific sites. The following table describes the advantages of using the Connector with rollout:

<table>
<thead>
<tr>
<th>Using Rollout</th>
<th>Not Using Rollout</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Process</strong></td>
<td><strong>Number of steps</strong></td>
</tr>
<tr>
<td>Roll out pages, which automatically sends them to the Translation Queue.</td>
<td>One step.</td>
</tr>
<tr>
<td>1. Roll out a same-language version.</td>
<td></td>
</tr>
<tr>
<td>2. Translate copied version.</td>
<td></td>
</tr>
<tr>
<td><strong>Link between source and content</strong></td>
<td><strong>Link between source and content</strong></td>
</tr>
<tr>
<td>Source and target can be linked, so when source is updated, changes are automatically sent to the Translation Queue.</td>
<td>No linkage between source and target.</td>
</tr>
</tbody>
</table>

### How the Connector Fits into MSM and Rollouts

The Connector does not have its own user interface during rollout: when you roll out content, you use AEM’s rollout interface. The Connector manages the translation during the rollout based on your company’s settings for the following options:
AEM only translate content from locked components
Target pages are MSM live copy pages/Target Pages Have Content In Source Language
Unlock the component after translated content come back
Allow translated content from Not-Sync components

6.2 Configuring Connector Languages

You configure the language branches in the Web site structure where the Connector returns translated content, and you configure the language options for Sidekick and the Bulk Translation wizard.

You must correctly configure all the languages you are using on your site before sending any jobs for translation.

Note about i18n dictionary items: If you plan to send i18n dictionary items for translation, you must configure the languages for these items separately, as described in the AEM documentation, here: http://docs.adobe.com/docs/en/aem/6-0/develop/components/i18n/translator.html. In addition, the i18n dictionaries language codes may be different from the language codes used in pages. For details, see: http://docs.adobe.com/docs/en/aem/6-0/develop/components/i18n/translator.html#Changing%20Languages%20Listed%20in%20the%20Dictionary%20Table.

Note about AEM 6.1 built-in languages: In AEM 6.1, the Connector provides default language mapping for AEM 6.1 built-in languages. Additional setup is not required, and therefore, these languages are not available for further configuration, as shown below. However, you can add additional language mappings, as described in this section.

Important: Do not change the name of a language or delete a language if there is translation content in the Translation Queue, or if there are translation jobs in progress.

To configure languages for the Connector:

1. Click Admin Tools > Language Mapping in the Clay Tablet Connector rail to open the Language Mapping page. For information on opening the Clay Tablet Connector rail, see "Configuring the Connector" on page 33.
2. Click **Add** in the top-right corner of the page to add a new language.
   A blank row is displayed at the bottom of the list. Enter the new language in this row.

3. Enter the following information in the appropriate columns:

<table>
<thead>
<tr>
<th>Column</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>The name of the language, which is the language identifier. <strong>Note:</strong> Do not use a space between the language code and country code. Instead, use an underscore (_).</td>
<td>CA_FR</td>
</tr>
</tbody>
</table>
| Reference CRX Path | The path to the content for the language in CRXDE Lite. **Note:** If the CRX content path is similar to 
/content/geometrixx/en/products, this should be similar to en. 
If the CRX content path is similar to 
/content/geometrixx/us/en/products, this should be similar to us/en. | ca/fr   |
### 6.2 Configuring Connector Languages

<table>
<thead>
<tr>
<th>Column</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type</td>
<td>The type of language identifier. Select one of the following:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Country</td>
<td>Country + Language</td>
</tr>
<tr>
<td></td>
<td>- Language</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Country + Language</td>
<td></td>
</tr>
<tr>
<td>CTC Language</td>
<td>The corresponding Clay Tablet language code. Select it from the list. For a</td>
<td>French_Canada</td>
</tr>
<tr>
<td></td>
<td>list and description of Clay Tablet language codes, see &quot;Appendix: Language</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Codes&quot; on page 115.</td>
<td></td>
</tr>
<tr>
<td>Sort #</td>
<td>This is the importance you assign to the language code, which determines</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>the order in which it is displayed in a list of languages. The most</td>
<td></td>
</tr>
<tr>
<td></td>
<td>important is 1.</td>
<td></td>
</tr>
</tbody>
</table>

**Note:** Any new language you add is not automatically displayed in the Bulk Translation wizard or in Sidekick. For the language to be displayed there, you must add it to the relevant team profile, as described in "Configuring Team Profiles" on page 77.

4. Repeat steps 2 and 3 for any additional languages to add.

5. You can modify the values for any other languages in the list.

6. When you are done, click **Save Config** at the bottom of the page.

This language configuration will be displayed in the Bulk Translation wizard and when accessing the Connector from Sidekick.

- To delete a language so that it will no longer be displayed in the Bulk Translation wizard and when accessing the Connector from Sidekick, click the corresponding **Del** button.

- To export the language settings to an XML file, click **Export** at the bottom of the page. The Connector downloads the XML file.

### 6.2.1 Adding Custom Clay Tablet Languages and Codes

The Clay Tablet SDK includes a list of pre-defined languages and language codes. If your company wants to use an additional language that does not have a corresponding Clay Tablet language and code, then you can create a custom Clay Tablet language and language code support.

However, your company will be sending content to a translation management system (TMS) that does not support your new language code. Therefore, you must contact both Clay Tablet Technologies and the translation provider so that they can map your language codes to those supported by the TMS.

**Recommendation:** Use standard Clay Tablet language codes. For a list and description of Clay Tablet language codes, see "Appendix: Language Codes" on page 115.

1. To add a custom language, do one of the following:
In the Touch-Optimized UI of AEM, click **Tools** in the AEM rail. Then, in the **Granite Operations** section, click **CRXDE Lite**.

In the Classic UI of AEM, click **CRXDE Lite** in the right pane.

In your Web browser, navigate to `/crx/de/index.jsp` on your AEM instance.

**CRXDE Lite** opens.

2. In the navigation pane on the left, navigate to `/etc/ctctranslation/ctaddlanguages`.

3. Select the sample language node, and copy and paste it as a new node.

4. Rename the new node, and change the values of the **Code** and **Name** properties.
5. In the CRXDE Lite Menu, click Save All.

The new language code is now available for selection in the Language Mapping page, which is described on "Configuring Connector Languages" on page 61.

6.3 Configuring which Components and Properties to Send Out for Translation

The content of an AEM page is created from a collection of page components. A component has different properties, which are types of fields. You must configure which components and properties the Connector can...
send out for translation.

To configure which components and properties the Connector sends out for translation:

1. Click **Admin Tools > Component Mapping** in the Clay Tablet Connector rail to open the **Component Mapping** page. For information on opening the Clay Tablet Connector rail, see "Configuring the Connector" on page 33.

   For information on using this page to subscribe to email notifications when new components are added, see "Subscribing to Email Notifications about New Fields and Components" on page 68.

   ![Component Mapping](image)

   The **Configured Fields for Translation** section at the top of the page displays all the components and properties that are currently configured for the Connector to send out for translation.

2. Optional. You view a list organized either by property, or by the component.
   
   - To view the list organized by property, in the **Sort By** field, select **Property**. This is the default setting.
   - To view the list organized by component, in the **Sort By** field, select **Component**.

3. Optional. You can instruct the Connector to collect all properties that are in a specific component for translation. Similarly, you can instruct the Connector to collect all components that have a specific property for translation. You can also remove any component or property from the list, so that the Connector does not collect it to send for translation.
If you are viewing the list organized by property, then the properties are displayed in alphabetical order. Each component that has this property is displayed underneath it. The components are listed alphabetically by path.

- To instruct the Connector to send all components with a specific property for translation, click the corresponding Set for all components button. The list under the property updates, and the Connector displays [ALL] instead of a list of all components.

- To remove a component from the list for a property, select the corresponding check box and click Delete. This prevents the Connector from sending out for translation this property in this component.

If you are viewing the list organized by component, then the components are displayed in alphabetical order. Each property in a component is displayed underneath it. If there are any properties displayed in all components, these are at the top of the list, under [ALL].

- To remove a component from the list, so that the Connector does not send it out for translation, select the corresponding check box and click Delete.

- To remove a property under a component from the list, so that the Connector does not send out that property for translation when it is in that component, select the corresponding check box and click Delete.

4. Optional. You can export as an XML file the list of fields that the Connector sends out for translation. Click Export at the bottom of this section. The Connector downloads the file.

5. Optional. In the Collect Fields for Translation from Path section, you can add additional properties to the list that the Connector can send out for translation.

a. In the Site path field, specify the highest-level folder that contains the component with the properties you want to include.

   - Click the arrow at the end of the field, browse to the folder, and click Select.

   - Enter the CRX path of the folder in the following format: /content/www/us/en.

b. Click Collect.

   The Connector searches all components and finds the string-type properties (fields) for all items. When it is done, the Connector displays the lists of properties in the specified folder in the Collected Possible Property Fields for Translation list. Under each property, the Connector displays the path of the component where it is located. To the right, the Connector displays the sample value of the string and underneath it, the path of origin of the sample value.
c. Select the check boxes for all the properties you want the Connector to send out for translation.

d. Click Add checked.

These property fields are now displayed in the **Configured Fields for Translation** section at the top of the page.

In the **Collected Possible Property Fields for Translation** section, you can also perform the following actions:

- To clear all selected check boxes, click **De-select all**.
- To select all check boxes, click **Select all**.
- To subscribe to email notifications when new components are added to your site, click **Set alarm**. For details, see "Subscribing to Email Notifications about New Fields and Components" on page 68.

### 6.4 Subscribing to Email Notifications about New Fields and Components

If you are planning to add new components in the future, you can subscribe to receive email notifications when new components are added to your site. When new components are added, you receive an email notification listing the new components, and you can then configure the Connector to send out the new properties for translation.

Subscribing to email notifications about new fields and components is recommended in the following scenarios:

- If you want to collect a lot of content for translation, for example, if you are still building your site.
- If you are planning to add new components in the future. When new components are added, the specified user receives an email notification listing the new components.

1. Click **Admin Tools > Component Mapping** in the Clay Tablet Connector rail to open the Component Mapping page. For information on opening the Clay Tablet Connector rail, see "Configuring the Connector" on page 33.
For information on using this page to configure which properties and components to send out for translation, see "Configuring which Components and Properties to Send Out for Translation" on page 65.

2. Click **Set alarm**.
   The Setup alarm for new fields dialog box opens.

3. In the **Site path to search** box, type in the path to the content for which to receive email notifications when new components are added.

4. In the **Email address to notify** box, enter the email address that will receive email notifications when new components are added under the specified path.

5. Click **Save**.
   Every hour, the Connector searches for and collects new components for translation. Whenever the Connector collects new components, it sends an email notification to the specified email address. The email notification is similar to the following:
   From: claytabletqa@gmail.com [mailto:claytabletqa@gmail.com]
   To: smith@example.com
Subject: Found 2 new Properties

Found 2 new added Properties.
1) Property Name: jcr:description
   Value: Component: foundation/components/form/text
   Path: /content/geometrixx/en/toolbar/feedback/jcr:content/par/0002
2) Property Name: options
   Value: Component: foundation/components/form/dropdown
   Path: /content/geometrixx/en/toolbar/profiles/edit/jcr:content/par/dropdown

6. After you receive this email notification, return to the Component Mapping page, and click Load alarm fields.

The Collected Possible Property Fields for Translation list displays the collected properties.

7. Select the check boxes for the properties to add, and click Add checked.
This configures the Connector to send out the selected properties for translation.

6.5 Configuring Translation Providers and the CMS Address and Platform Keys

The Connector uses the license ID number you entered in "Translation Platform" on page 37 to generate the CMS address and platform keys you configure in this section.

Important - Keys: The Connector always initiates calls to the Clay Tablet Platform. However, the CMS address and platform keys enable establishing a secure, discrete connection between the Connector instance and the
Platform. Do not duplicate these keys or install them on multiple AEM Content Editor instances, because this is a violation of the Clay Tablet License Agreement. Using the same keys on multiple AEM Content Editor instances will cause the Connector to behave unexpectedly, which can result in lost translation content, orphaned projects, and inaccurate translation status reports. Clay Tablet will support technical issues caused by duplicating or incorrectly installing keys only on a time and materials basis.

**To configure the translation providers and keys:**

1. Click **Admin Tools > LSP and Keys** in the Clay Tablet Connector rail to open the **LSP & Keys** page. For information on opening the Clay Tablet Connector rail, see “**Configuring the Connector**” on page 33. The **LSP and Related Keys** section displays the account keys for all configured translation providers.

2. Optional. To export and download this information as an XML file, click **Export**.

3. To add a new translation provider and account license keys, in the top-right corner click **Add**.

   **Note:** To update or remove the account license keys for a current translation provider, click **Edit** for that translation provider.

The **LSP & Keys** page expands.
4. In the **LSP Name** field, type the name of your translation provider.

5. In the **Account (key)** field, click **Retrieve** and select the account license key for the translation provider.

   **Note:** After a key has been configured, you cannot select it again for use. It is displayed in the drop down list as unavailable, in gray.

   **Tip:** If keys are not displayed in the dropdown list, verify that you entered the license ID in the **Translation Platform** section of the **Configuration** page, as described in "Translation Platform" on page 37. If keys are still not displayed, you may need to configure a proxy server, as described in "Network Configuration" on page 36.
6. Click Get key XML.

The Source Key XML and the Platform Key XML boxes are populated.

- The Source Key XML has the CMS address key.
- The Platform Key XML box has the platform key, for accessing the Clay Tablet Platform.

7. Click Test beside the Source Key XML box.

A message box indicates whether this key passed the test.

8. Click Test beside the Platform Key XML box.

A message box indicates whether this key passed the test.

9. In the Is Freeway box, if this translation provider is Freeway/Lionbridge, select Yes. Otherwise, select No.

10. If testing passed, then click Add. This updates the Name, Source Account, and Platform Account columns in the LSP and Related Keys section at the top of the page.

11. If you are adding additional translation providers, repeat steps 3-10 for each one to add.
After you add multiple translation providers, the Default LSP field is displayed.

12. Select your default translation provider and click Save.

13. At the bottom of the page, click Add to save the keys for the new translation provider.

Alternatively, if you clicked Edit earlier for an existing translation provider, the following buttons are displayed instead:

- Click Update to save your changes to this translation provider.
- Click Delete to delete the account license keys for this translation provider.
- Click Close to close the bottom part of this page without saving any changes.

6.5.1 Configuring Translation Providers and Account License Keys when Installing a New or Updated Connector for AEM Package

When you install a new or updated Connector for AEM package, you must reconfigure your translation providers and keys. If your keys are displayed in gray and you cannot select them when you attempt to retrieve them, please contact Clay Tablet Support to request releasing your license keys. For details, see "How to Contact Clay Tablet Support" on page 1.
6.6 Configuring Connector Search Agents

The Connector can use a search agent to collect pages for translation in the Bulk Translation wizard. The
Connector installs the following three pre-configured agents:

- Get current page
- Get all children pages
- Get current page and all children pages

You can create additional custom search agents to find any kind of content in your site for translation.

To make a custom search agent available to the Bulk Translation wizard:

1. Write a search agent as a Java class and upload it.
   - This Java class should implement the PageSearchProcess interface. It should use the following
   method: public List<CollectedPage> collectPages4Translation(String searchRootPath, Session session, PageManager pageManager).
   - This requires the Connector for AEM API, which includes sample code. To request this API, contact Clay
     Tablet Support, as described on page 1.

2. Upload the search agent you just created. You can do this either by including this in the Connector for AEM
   package you install, or you can install it separately using the Apache Felix Web Console, which you access at
   /system/console/components on your AEM instance.

3. Click Admin Tools > Search Agents in the Clay Tablet Connector rail to open the Search Agents page. For
   information on opening the Clay Tablet Connector rail, see "Configuring the Connector" on page 33.
   - The Search Agents page opens, displaying the pre-configured agents.

4. Click Add in the top-right corner of the page.
   - The page expands to display the Add a New Page Search Agent section.
5. In the Add a New Page Search Agent section, add the following information:
   - **Name**: The name that will be displayed for the custom agent in the Search using agent dropdown list in the Bulk Translation wizard.
   - **Class**: The Java class for the custom agent.

6. Click **Test**.
   A window opens where you enter an AEM folder path. The Connector then calls the new agent class to search the path you entered. This tests whether the Connector can call the new agent and search successfully for pages.

7. If the test is successful, click **Add** at the bottom-right corner of the page to add the custom agent to the user interface of the Bulk Translation wizard.

---

### 6.7 Configuring AEM User Permissions for Translation Users

You configure user permissions in the Permissions tab of the User Admin page on your AEM instance. In your browser, navigate to `/useradmin` on your AEM instance to open this page.

Suppose that your AEM instance has the following user groups:
- Translation Submission
- Translation User
- Translation Admin

Users assigned to these groups can send content for translation as follows:

<table>
<thead>
<tr>
<th>User Group</th>
<th>Bulk Translation</th>
<th>Sidekick</th>
<th>Blueprint Rollout</th>
</tr>
</thead>
<tbody>
<tr>
<td>Translation User</td>
<td>Users can send content only to the Translation Queue. The required user permissions are <strong>Read</strong>, <strong>Modify</strong>, <strong>Create</strong>, and <strong>Delete</strong>.</td>
<td>Users can send content only to the Translation Queue. The required user permissions are: <strong>Read</strong>, <strong>Modify</strong>, <strong>Create</strong>, and <strong>Delete</strong>.</td>
<td>Users can send content only to the Translation Queue. The required user permissions are: <strong>Read</strong>, <strong>Modify</strong>, <strong>Create</strong>, and <strong>Delete</strong>.</td>
</tr>
<tr>
<td>Translation Submitter</td>
<td>Users can send content either to the Translation Queue or directly out for translation. The required user permission is <strong>Read</strong>.</td>
<td></td>
<td>Users can send content either to the Translation Queue or directly out for translation. The required user permissions are: <strong>Read</strong>, <strong>Modify</strong>, <strong>Create</strong>, and <strong>Delete</strong>.</td>
</tr>
<tr>
<td>Translation Admin</td>
<td></td>
<td>Users can send content either to the Translation Queue or directly out for translation. The required user permission is <strong>Read</strong>.</td>
<td></td>
</tr>
</tbody>
</table>
6.8 Configuring Team Profiles

A team profile defines a set of Connector users who are allowed to send content out for translation from the specified source languages, to the specified target languages, using the specified translation providers.

To create a team profile:

1. Click Admin Tools > Team Profiles in the Clay Tablet Connector rail to open the Team Profiles page. For information on opening the Clay Tablet Connector rail, see "Configuring the Connector" on page 33.
   The Team Profiles page opens, displaying any team profiles that have already been created.

2. Click Add.
   The page expands, displaying the Profiles section.

3. Specify the following information about the team profile:

<table>
<thead>
<tr>
<th>Field/Column</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>The name of the team profile.</td>
</tr>
<tr>
<td>Source Language</td>
<td>Select the check boxes of the source languages in which team members can send out content for translation. The list of available languages is based on the configured languages. For details, see &quot;Configuring Connector Languages&quot; on page 61.</td>
</tr>
<tr>
<td>Target Language</td>
<td>Select the check boxes of the target languages for which team members can send out content for translation. The list of available languages is based on the configured languages. For details, see &quot;Configuring Connector Languages&quot; on page 61.</td>
</tr>
<tr>
<td>LSP</td>
<td>Select the check boxes of the translation providers to which team members can send out content for translation. The list of available translation providers is based on the configured translation providers. For details, see &quot;Configuring Translation Providers and the CMS Address and Platform Keys&quot; on page 70.</td>
</tr>
</tbody>
</table>
### AEM Users
Select the check boxes of the AEM users to include in the team profile.
AEM users are identified by their display names. If a display name is not configured for an AEM user, the email address is displayed instead.

### AEM Groups
Select the check boxes of the AEM groups to include in the team profile.

4. Click **Save**.

### 6.9 Configuring the Service Components

You can configure how frequently the Connector checks for processing, sending, and receiving translations.

- The `ctcPrepareService` agent controls the frequency that the Connector checks for processing translations.
- The `ctcUploadService` agent controls the frequency that the Connector checks for sending and receiving translations.

To configure these agents:

1. If the Adobe Experience Manager Web Console Components page is not already open, then in your browser, navigate to `/system/console/components` on your AEM instance to open it.
   
   This page displays all components alphabetically, by name.

2. Scroll down to locate one of these Connector components in the list:
   - `com.claytablet.cq5.ctctranslation.impl.CTCPrepareServiceImpl`
   - `com.claytablet.cq5.ctctranslation.impl.CTCUploadServiceImpl`

3. In the **Actions** column, click the corresponding Configure button.

   The configuration dialog box for the service opens.

4. In the `scheduler.period.name` field, you can edit the frequency of this task.
   - The default value of the `ctcPrepareService` agent is 30 seconds.
The default value of the ctcUploadService agent is **60 seconds**. You can change this value to meet your particular requirements.

5. Click **Save** to save your changes.

6. If desired, repeat steps 2-5 for the other agent.

### 6.10 Configuring Custom Content Types

When you send content for translation using the Bulk Translation wizard, the Translation Queue, or Sidekick you can use the **content type** to filter the content you want to send.

**Note:** Specifying the content type in Sidekick is available only when working with the Sidekick wizard user interfaces.

Clay Tablet can also configure routing rules to send content of each type to a different translation provider. By default, the Connector includes three content types, which have the following default labels:

- Marketing
- Technical
- Legal

You can change these labels to reflect your company’s needs. For example, you can send all your marketing content to your translation provider, and all your user-generated content to a machine translation service. In the Clay Tablet Platform, the Connector can configure content rules based on content types as follows:

- You can send different content types to different translation providers.
- You can send different content types to different TMSs (translation management systems).
- You can send different content types to different processing profiles within a single TMS instance.

**Note:** Please contact Clay Tablet Support before proceeding. For details, see page 1.

1. Do one of the following to open **CRXDE Lite**, where you can configure custom content types:
   - In the Touch-Optimized UI of AEM, click **Tools** in the AEM rail. Then, in the **Granite Operations** section, click **CRXDE Lite**.
   - In the Classic UI of AEM, click **CRXDE Lite** in the right pane.
   - In your web browser, navigate to **/crx/de/index.jsp** on your AEM instance.
   
   **CRXDE Lite** opens.

2. In the navigation pane on the left, navigate to **/etc/ctctranslation/ctcconfig_ContentTypes**.
3. In the Properties tab in the Home tab, double-click in the Value column of the content-type label to change, and type the new label.

4. Repeat the previous step for each content-type label you want to change.

### 6.11 Configuring the Rollout Feature

If the Rollout feature is enabled, then when users roll out files, the Connector automatically sends them to the Translation Queue, using your company's default translation settings. There are three settings for this feature. The setting you choose determines the configuration method you use:

- You can configure the Connector to send all your rollout pages to the Translation Queue.
- You can configure the Connector to send only some of your rollout pages to the Translation Queue, using a workflow.
- You can configure the Connector to send only some of your rollout pages to the Translation Queue, using a filter.

**Note:** The setting determines the configuration method you use.

**Configure the Connector to send all rollout pages to the Translation Queue**

1. In the Translation Settings section of the Configuration page, select the **Catch rollout pages to [Rollout] Queue** check box. For details, see "Translation Setting" on page 42.

2. When creating a Livecopy site, use the default AEM rollout config.
Configure the Connector to send only some rollout pages to the Translation Queue, using a workflow

**Important information for updated Connector installations:** For new installations of the Connector versions 2.3.0 or higher, no additional steps are required. If you are updated your Connector installation from a version before 2.3.0, you must perform the steps described in "Update the CTCRolloutTranslation workflow" on page 81 to update the workflow before performing the following steps.

1. In the Translation Settings section of the Configuration page, clear the **Catch rollout pages to [Rollout] Queue** check box. For details, see "Translation Setting" on page 42.

2. Create your own rollout config in CRXDE Lite that includes the CTCRolloutTranslation workflow. For detailed instructions on creating a rollout config, refer to the AEM documentation at:

   - [http://dev.day.com/docs/en/cq/current/administering/multi_site_manager.html#Creating a Rollout Configuration](http://dev.day.com/docs/en/cq/current/administering/multi_site_manager.html#Creating a Rollout Configuration) (AEM 5.6.1)
   - [http://dev.day.com/docs/en/aem/6-0/administer/sites/multi-site-manager/msm-sync.html#Creating a Rollout Configuration](http://dev.day.com/docs/en/aem/6-0/administer/sites/multi-site-manager/msm-sync.html#Creating a Rollout Configuration) (AEM 6.0)

   For a description of the CTCRolloutTranslation workflow, see "Viewing the Rollout Workflow" on page 89.

3. When creating a Livecopy site, select the rollout config you created.

**Update the CTCRolloutTranslation workflow**

**Important:** These steps are required only for a Connector installation updated from a version before 2.3.0, and when configuring the Connector to send only some rollout pages to the Translation Queue using a workflow, as described above.

1. In your Web browser, navigate to /libs/cq/workflow/content/console.html on your AEM instance to open the **CQ5 Workflow** page.

2. Locate the CTCRolloutTranslation workflow. Click to select it, and then right-click and select **Edit** from the context menu.
   The workflow opens for editing in a new Web page.

3. Mouseover the **CTC Rollout Translation** workflow, right-click, and select **Edit** from the context menu.

4. In the **Process** tab:
   a. Ensure that the **Process** is
      `com.claytablet.cq5.ctctranslation.workflow.RolloutCTCQueueProcess` *(and not RolloutCTCTranslationProcess)*.
   b. Select the **Handler Advance** check box.
   c. Click **OK** to close the dialog box.

5. Click **Save** to save your changes.
Configure the Connector to send only some rollout pages to the Translation Queue, using a filter

1. In your browser, navigate to: /system/console/components on your AEM instance. The Adobe Experience Manager Web Console Components page opens. This page displays all components alphabetically, by name.

2. Scroll down to locate the Connector components, whose names all start with com.claytablet.

3. Verify that the following Clay Tablet component is installed and active in Adobe AEM: com.claytablet.cq5.ctctranslation.impl.CTCRolloutCheckServiceImpl.

4. Code a filter class to call the following Clay Tablet interface: com.claytablet.cq5.ctctranslation.service.Rollout.IRolloutTranslationFilter. See the sample code, at the bottom of this section.

5. Implement the following function:
   public boolean catchRolloutToTranslation(
   final String bluePrintPage,
   final String liveCopyPage,
   final Session jcrSession,
   final ResourceResolver resourceResolver,
   final LiveRelationshipManager liveRelationshipManager,
   final CTPageService ctcPageService,
   final CTLogService ctcLogService,
   final CTCDataService ctcDataService
   );

6. If the Connector Translation Queue will capture the rollout pages, the function should return a Boolean value of True.

7. Do one of the following to open CRXDE Lite, where you can configure the Rollout Filter in the Adobe AEM CRXDE interface:
   - In the Touch-Optimized UI of AEM, click Tools in the AEM rail. Then, in the Granite Operations section, click CRXDE Lite.
   - In the Classic UI of AEM, click CRXDE Lite in the right pane.
   - In your Web browser, navigate to /crx/de/index.jsp on your AEM instance.

CRXDE Lite opens.

8. In the navigation pane on the left, navigate to /etc/ctcppipelineconfig/ctcRolloutTranslationFilter.

9. Create a child note of type nt:unstructured and give it a human-readable name, for example, CustomTestFilter.
10. Add the following node properties:
   a. **Name** = Active, **Type** = Boolean, **Value** = True
   b. **Name** = ImplementedClass, **Type** = String, **Value** = Filter Class name, for example: com.testguru.ctfilter.test.CTFilterTest.CustomRolloutFilter

   ![image](https://example.com/image.png)

   **Clay Tablet interface sample code**

   **Note:** The following sample code is also included in the following package, which is in the following location in CRXDE Lite: /apps/CTFilterTest/src/impl/src/main/java/com/testguru/ctfilter/test/CTFilterTest/impl/Activator.java. You can install this package using the CRX Package Manager. For detailed instructions on using the CRX Package Manager, see "Installing the Clay Tablet Connector and the Freeway Add-On" on page 25

   ```java
   package com.testguru.ctfilter.test.CTFilterTest;

   import javax.jcr.Session;
   import org.apache.sling.api.resource.ResourceResolver;
   import com.claytablet.cq5.ctctranslation.service.CTCDataService;
   import com.claytablet.cq5.ctctranslation.service.CTCPageService;
   import com.claytablet.cq5.ctctranslation.service.CTLogService;
   import com.day.cq.wcm.msm.api.LiveRelationshipManager;
   import com.claytablet.cq5.ctctranslation.service.Rollout.IRolloutTranslationFilter;

   public class CustomRolloutFilter implements IRolloutTranslationFilter {
   }
   ```
public boolean catchRolloutToTranslation(final String bluePrintPage, final String liveCopyPage, final Session jcrSession, final ResourceResolver resourceResolver, final LiveRelationshipManager liveRelationshipManager, final CTCPageService ctcPageService, final CTLogService ctcLogService, final CTDataService ctcDataService)
{
    ctcLogService.LogRolloutDebug("[CustomRolloutFilter] passed Blueprint page: " + bluePrintPage);
    ctcLogService.LogRolloutDebug("[CustomRolloutFilter] passed liveCopyPage page: " + liveCopyPage);

    // Add your own logic here.
    if (bluePrintPage.startsWith("/content/geometrixx/en/blog"))
    {
        ctcLogService.LogRolloutDebug("[CustomRolloutFilter] Blueprint page " + "is starting with path [/content/geometrixx/en/blog], ignored.");
        return false;
    }
    else
    {
        return true;
    }
    // Do not close passed JCR Session and ResourceResolver. Clay Tablet needs these
    // to do more filter calls.
}

6.12 Enabling Content Collection from Blueprint Pages

You can instruct the Connector to globally collect content from Blueprint pages using the Pickup Content From Blueprint Pages CRX setting in CRXDE Lite.

Note: When this feature is enabled, the Connector synchronizes non-translatable properties, such as images, from a locked component.
How the Pickup Content From Blueprint Pages setting interacts with other related settings

- This setting is available only when the Target Pages Have Content in Source Language check box is selected.

- If this setting is specified, the Connector always acts as though the Only translate content from locked components check box is selected, even if it is not selected. This occurs because only content from locked components are rolled out from Blueprint pages to live copy pages.

- If this setting is specified, the Connector always acts as though the Translate Non-Sync'd Components on this page check box is selected, even if it is not selected. This occurs because only content from locked components is rolled out from Blueprint pages to live copy pages:
  
  - In general, during MSM rollout, content from blueprint pages overwrites the content of locked components in live copy pages. The Connector retrieves content from the live copy pages and sends it out for translation. Until the translation returns, the live copy page has the un-localized content from the blueprint page.
  
  - However, if there is no MSM rollout or if there is a custom rollout configuration that excludes copying over the content, then the content from the blueprint page does not overwrite the content of the locked components in the live copy page. Live copy pages may contain the old version of localized content.

In both scenarios, the Connector returns the translated content to the live copy page.

For descriptions of all the related settings, see "UI and Default Settings" on page 47.

To enable the Pickup Content From Blueprint Pages setting:

1. Do one of the following to open CRXDE Lite:
   
   - In the Touch-Optimized UI of AEM, click Tools in the AEM rail. Then, in the Granite Operations section, click CRXDE Lite.
   
   - In the Classic UI of AEM, click CRXDE Lite in the right pane.
   
   - In your Web browser, navigate to /crx/de/index.jsp on your AEM instance.

   CRXDE opens.

2. In the navigation pane on the left, navigate to /etc/ctctranslation/PageOptions.

3. Locate the PickupContentFromBlueprintPages property.

4. Double-click in the Value column, and select true from the dropdown list.

The Pickup Content From Blueprint Pages setting is now enabled.

Note: To turn off this setting, repeat the previous steps, but in the last step, select false from the dropdown list.
6.13 Configuring the TMX to Include the Original Translation

By default, when you use the Update TM functionality, the Connector updates the TM (translation memory) with the following information from the TMX file:

- the original source content item
- the translated content item from AEM

You can configure the Connector to also include the original translation returned by the translation provider in the TMX file.

To configure this setting:

1. Do one of the following to open CRXDE Lite:
   - In the Touch-Optimized UI of AEM, click Tools in the AEM rail. Then, in the Granite Operations section, click CRXDE Lite.
   - In the Classic UI of AEM, click CRXDE Lite in the right pane.
   - In your Web browser, navigate to /crx/de/index.jsp on your AEM instance.
   
   CRXDE opens.

2. In the navigation pane on the left, navigate to /etc/ctctranslation/TransOptions.

3. Locate the TMXIncludeOriginalTranslation property.

4. Double-click in the Value column, and select true from the dropdown list.

The Connector will now send the original translation returned by the translation provider to the TM.
7 Integrating the Connector with AEM Workflows

This section is optional. The core Connector workflow package includes the CTCRestoreOriginalSync and CTCRolloutTranslation workflows. If you want to use the Sample_CT_Workflow_Translation workflow, you install the optional workflow package.

<table>
<thead>
<tr>
<th>Workflow</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CTCRestoreOriginalSync</td>
<td>If the Leave component unlock after putting back translated content is specified, you can run this workflow to lock components and restore their original inheritance. This workflow does not require installation or customization. For a description of this workflow, see page 90.</td>
</tr>
<tr>
<td>CTCRolloutTranslation</td>
<td>This is the sample workflow for sending out files for translation when you roll out files. If you use this method to set up the rollout integration with the Connector, you include this workflow in your own rollout config. This workflow does not require installation or customization. For a description of this workflow, see page 89.</td>
</tr>
</tbody>
</table>
| Sample_CT_Workflow_Translation | You can use the Sample_CT_Workflow_Translation workflow to send a page to the Translation Queue. You can customize this workflow.  
  - For instructions on installing this workflow, see page 87.  
  - For instructions on customizing this workflow, see page 88.                                                                                      |

7.1 Installing the Optional Workflow Package

1. To install the optional workflow package, so that you can use the Sample_CT_Workflow_Translation workflow, do one of the following:
   - In the Touch-Optimized UI of AEM, click Tools in the AEM rail. Then, in the Granite Operations section, click Packages.
   - In the Classic UI of AEM, scroll down and click Packages in the right pane.
   - In your Web browser, navigate to /crx/packmgr/index.jsp on your AEM instance.

   The CRX Package Manager opens.
2. Click the Clay Tablet Sample Workflow package, and follow the on-screen instructions to install it.

3. After the package is installed, do one of the following to open the **CQ5 Workflow** page:
   - In the Touch-Optimized UI of AEM, click **Tools** in the AEM rail. Then, in the **CQ Operations** section, click **Workflows**.
   - In the Classic UI of AEM, click **Workflows** in the right pane.
   - In your Web browser, navigate to /libs/cq/workflow/content/console.html on your AEM instance.

   The workflows you installed are displayed in the page.

4. To customize a workflow, click to select it, and then right-click and select **Edit** from the context menu.

   **Tip:** To locate the **Sample_CT_Workflow_Translation workflow**, click the Next Page button.

   For instructions on customizing the **Sample_CT_Workflow_Translation workflow**, see page 88.

### 7.1.1 Customizing the Standard Translation Workflow

You can customize the **Sample_CT_Workflow_Translation workflow**, which you can use to send a page to the Translation Queue.

1. Open the **CQ5 Workflow** page, as described on page 87.

2. Locate the **Sample_CT_Workflow_Translation workflow**. Click to select it, and then right-click and select **Edit** from the context menu.

   **Tip:** To locate the **Sample_CT_Workflow_Translation workflow**, click the Next Page button.

   The workflow opens in a new browser tab.
By default, this workflow includes the following two steps, which are required to integrate AEM with the Connector processes:

- **Translation setting**: This is a **participant** type of workflow step, where a user must specify some translation settings and can enter comments.

- **Add page translation**: This is a **process** type of workflow step, where Connector retrieves translation settings from the previous step and adds page translation properties.

**Warning**: Do not modify these steps, except for the titles. Otherwise the Connector integration with the AEM workflow may not work properly.

You can add additional steps as needed to meet your company's business requirements. For detailed instructions on setting up workflows, refer to the AEM workflow documentation, available at: [http://dev.day.com/docs/en/cq/current/workflows/wf-overview.html](http://dev.day.com/docs/en/cq/current/workflows/wf-overview.html).

### 7.2 Viewing the Rollout Workflow

You can add the CTCRolloutTranslation workflow to your custom rollout config to integrate the Connector with rollout. This is the configuration method to use when you want the Connector to send only some rollout files to the Translation Queue.

**Note**: Alternatively, you can use the Catch rollout pages to [Rollout] Queue setting in the Translation Setting section of the Configuration page to enable this functionality, as described in "Translation Setting" on page 42. This option is the configuration method to use when you want the Connector to send out all rollout files to the Translation Queue. For more information about configuring this feature, see page 80.
1. Open the **CQ5 Workflow** page, as described on page 87.

2. Locate the **CTCRolloutTranslation** workflow. Click to select it, and then right-click and select **Edit** from the context menu.

   The workflow opens in a new browser tab.

   ![CTCRolloutTranslation Workflow](image)

   By default, this workflow includes the **CTC Rollout Translation** step, which is required to integrate AEM with the Connector processes. This is a *process* type of workflow step, where Connector adds rollout pages to the Translation Queue.

   **Warning**: Do not modify this step, except for the title. Otherwise the Connector integration with the AEM workflow may not work properly.

---

### 7.3 Viewing the Restore Original Sync Workflow

You can view the **CTCRestoreOriginalSync** workflow. After users send out components for translation, they can use this workflow to relock them to restore their original inheritance.

1. Open the **CQ5 Workflow** page, as described on page 87.

2. Locate the **CTCRestoreOriginalSync** workflow. Click to select it, and then right-click and select **Edit** from the context menu.

   The workflow opens in a new browser tab.
By default, this workflow includes the **Restore original Sync that unlocked by CTC translation** step, which is required to integrate AEM with the Connector processes. This is a process type of workflow step, where Connector relocks components and restores their original inheritance.

**Warning:** Do not modify this step, except for the title. Otherwise the Connector integration with the AEM workflow may not work properly.
8 Implementing an Event Listener to Catch Translation Events

The Connector fires events for translation-related actions. You can create an event handler to receive these events, and you can take action when these events occur.

Translation events

There are seven Connector translation events defined in the following class:
com.claytablet.cq5.ctctranslation.Events.EventDetailType

package com.claytablet.cq5.ctctranslation.Events;
public enum EventDetailType {
    QueueApproved,
    QueuePrepared,
    SentOut,
    Reached_Platform,
    StartedTranslation,
    ReceivedTranslationBack,
    CompletedTranslationProcess
}

Event topics

An Event Topic is com/claytablet/TRANSLATION, defined in the
com.claytablet.cq5.ctctranslation.Events.TranslationEvent class, which can be used as:
com.claytablet.cq5.ctctranslation.Events.TranslationEvent.EVENT_TOPIC.

Creating an event handler:

1. To retrieve a translation event, use:
   TranslationEvent translationEvent = TranslationEvent.fromEvent(Event event);

2. To retrieve a translation event type, use:
   EventDetailType eventType = translationEvent.getEventDetailType();

Event listener sample code

Note: The following sample code is also included in the following package, which is in the following location in CRXDE Lite: /apps/CTEventHanlder/src/impl/src/main/java/com/testguru/ctevents/hanlder/CTEventHanlder/impl/CTEventsHanlderImpl.java. You can install this package using the CRX Package Manager. For detailed instruction on using the CRX Package Manager, see "Installing the Clay Tablet Connector and the Freeway Add-On" on page 25.

```
9 Installing and Configuring the Connector in a Clustered Environment

This section describes how to install the Connector in a clustered environment. It assumes that you are upgrading the Connector from a non-clustered environment to a clustered environment.

9.1 Before You Install

Before you begin to install the Connector for AEM in a clustered environment, please review the system requirements, described on "System Requirements" on page 11, and verify that each host that will be a cluster node in the cluster meets the requirements.

1. Prevent users from deliberately or accidentally sending items for translation during the upgrade process.

   **Recommendation:** Remove users from groups with permission to send new translation jobs.

2. "Setting Your System Date, Time, and Time Zone Correctly" on page 11. Do this on each host that will be a cluster node.

3. "Downloading the Delivery Package" on page 12. Do this once. Save the package to a location that is accessible to all hosts that will be cluster nodes.

4. "Creating a Clay Tablet Connector Database on your Database Server Instance" on page 13. Ensure that the database is accessible to all hosts that will be cluster nodes.

5. "Creating the Clay Tablet Connector Folders" on page 14. These are the folders where the Connector stores your licensing information and your translation data. Create one set of folders and sub-folders. Ensure that the folders will be accessible to all nodes in the cluster.

   **Recommendation:** Implement a Network Attached Storage (NAS) or Network File System (NFS) solution to ensure that the folders will be accessible to all nodes in the cluster.

9.2 Installing, Configuring, and Testing the Connector on the First Node in the Cluster

Follow these instructions to install, configure, and test the Connector on the host that will be the first node in the cluster:

1. Install the Connector installation package you downloaded earlier (com.clay-tablet.cq5.6.1.ctc.client-2.0.zip) on the first node in your cluster. For detailed instructions, see "Installing the Clay Tablet Connector and the Freeway Add-On" on page 25.

2. Disable all Clay Tablet services.

3. Perform the post-installation tasks, as described in "Post-Installation Tasks" on page 26.

4. Configure the Connector, as described in "Configuring the Connector" on page 33.
5. Test your configuration by sending a few content pages to the Machine Translation provider.
   - If your test is successful, proceed to the next step.
   - If your test fails, contact Clay Tablet Support. For details, see "How to Contact Clay Tablet Support" on page 1.

7. Click the Disable buttons in the Actions column to disable the following components:
   - com.claytablet.cq5.ctctranslation.impl.CTCDownloadServiceImpl
   - com.claytablet.cq5.ctctranslation.impl.CTCPrepareServiceImpl
   - com.claytablet.cq5.ctctranslation.impl.CTCStatusServiceImpl
   - com.claytablet.cq5.ctctranslation.impl.CTCUpdateTMServiceImpl
   - com.claytablet.cq5.ctctranslation.impl.CTCUploadServiceImpl

9.3 Building an AEM Package from the First Node in the Cluster

From the host that is the first node in the cluster, you build an AEM package from etc/ctctranslation:

1. Do one of the following:
   - In the Touch-Optimized UI of AEM, click Tools in the AEM rail. Then, in the Granite Operations section, click Packages.
   - In the Classic UI of AEM, scroll down and click Packages in the right pane.
   - In your Web browser, navigate to /crx/packmgr/index.jsp on your AEM instance.

   The CRX Package Manager opens.

2. Click Create Package.

   The New Package dialog box opens.
3. Enter a name, version, and group for your package, and click **OK**.

The **Package Manager** displays the new package at the top of the page.

4. Click **Edit**.

The **Edit Package** dialog box opens.

5. Click the **Filters** tab and then click the magnifying glass button for the **Root path** field.

The **Select Path** dialog box opens.

6. **Navigate to** etc/ctctranslation and click **OK**.
7. Click **Add Filter**.

8. Click the magnifying glass button for the **Root path** field.

9. Navigate to **etc/ctcpipelineconfig** and click **OK**.
10. Click **Save** to close the Edit Package dialog box.

11. Click **Build** to build the package.
   
   A message box prompts you to confirm that you want to build the package.

12. Click **Build** to proceed.

---

### 9.4 Installing the Connector on the Remaining Nodes in the Cluster

Now you are ready to install and configure the Connector on the rest of the nodes in the cluster. Repeat the following steps on each node in the cluster:

1. Install the Connector installation package you downloaded earlier (*com.claytablet.cq5.6.1.ctc.client-2.0.zip*). For detailed instructions, see "Installing the Clay Tablet Connector and the Freeway Add-On" on page 25.

2. As soon as you finish installing the Connector on a node, immediately disable all Clay Tablet services.

3. Install the package you created in "Building an AEM Package from the First Node in the Cluster" on page 103.

4. Do one of the following:
   
   - In the Touch-Optimized UI of AEM, click **Tools** in the AEM rail. Then, in the **Granite Operations** section, click **Packages**.
   - In the Classic UI of AEM, scroll down and click **Packages** in the right pane.
   - In your Web browser, navigate to `/crx/packmgr/index.jsp` on your AEM instance.

   The **CRX Package Manager** opens.

5. Click the Connector package name and follow the on-screen instructions.

6. In your AEM instance, in your Web browser, navigate to `/system/console/components`.

   The **Adobe Experience Manager Web Console Components** page opens.

7. Click the Disable buttons ![ ] in the **Actions** column to disable the following components:

   - *com.claytablet.cq5.ctctranslation.impl.CTCDownloadServiceImpl*
   - *com.claytablet.cq5.ctctranslation.impl.CTCPrepareServiceImpl*
   - *com.claytablet.cq5.ctctranslation.impl.CTCStatusServiceImpl*
   - *com.claytablet.cq5.ctctranslation.impl.CTCUpdateTMServiceImpl*
   - *com.claytablet.cq5.ctctranslation.impl.CTCUploadServiceImpl*

   **Note:** You must disable these components on all the nodes in the cluster before testing the configuration. You can enable or disable these components on all nodes using the **ServicesConfigXML** property of the `/etc/ctctranslation/ctcconfig` file. For details, see "Turning Services On and Off on All Cluster Nodes" on page 107.
9.5 Turning Services On and Off on All Cluster Nodes

By default, all Clay Tablet services are running. In a single-node environment, all services should be running, and they are started by default.

In a clustered environment, only one instance of the following Clay Tablet services should be running:

- com.claytablet.cq5.ctctranslation.impl.CTCDownloadServiceImpl
- com.claytablet.cq5.ctctranslation.impl.CTCPrepareServiceImpl
- com.claytablet.cq5.ctctranslation.impl.CTCStatusServiceImpl
- com.claytablet.cq5.ctctranslation.impl.CTCUpdateTMServiceImpl
- com.claytablet.cq5.ctctranslation.impl.CTCUploadServiceImpl

This means either:

- All the services can run on a single node in the cluster. The services are disabled on all other nodes in the cluster.
- Different services can run on different nodes in the cluster. For example, PrepareService and UploadService run on node 1, StatusService and DownloadService run on node 2, and UpdateTMService runs on node 3. All other instances of the services on all nodes are turned off.

You can create the ServicesConfigXML property of the /etc/ctctranslation/ctcconfig file to facilitate turning these services off and on all cluster nodes.

To create this configuration option:

1. In Notepad or another text editor, create a configuration file with the following content:

```xml
<com.claytablet.cq5.ctctranslation.config.CTCServicesConfig>
  <PrepareService>false</PrepareService>
  <UploadService>true</UploadService>
  <StatusService>true</StatusService>
  <DownloadService>true</DownloadService>
  <UpdateTMService>false</UpdateTMService>
</com.claytablet.cq5.ctctranslation.config.CTCServicesConfig>
```

2. Edit this file so that true indicates a service you want to run, and false indicates a service you do not want to run.

3. Save this as an XML file, with UTF-8 encoding and without BOM (Byte Order Mark), for example, save this file as c:\ctctranslation_data\serviceconfig\serviceconfig.xml.

   **Note:** The values in the serviceconfig.xml file are hard coded, so they do not exactly match the actual service names, which are displayed in the Adobe Experience Manager Web Console Components page (/system/console/components).

4. Do one of the following to open CRXDE Lite:
In the Touch-Optimized UI of AEM, click **Tools** in the AEM rail. Then, in the **Granite Operations** section, click **CRXDE Lite**.

In the Classic UI of AEM, click **CrxDE Lite** in the right pane.

In your Web browser, navigate to /crx/de/index.jsp on your AEM instance.

**CrxDE Lite** opens.

5. In the navigation pane on the left, navigate to /etc/ctctranslation/ctcconfig.

6. At the bottom of the page, enter the following information to create the **ServicesConfigXML** property:

   - **Name**: ServicesConfigXML.
   - **Type**: String (the default selection).
   - **Value**: The path to the XML file you created, for example: c:\ctctranslation_data\serviceconfig\serviceconfig.xml.

   **Note**: If the path includes back slashes (\), you must replace them with double back slashes (\\).

7. Click **Add**.

**Note**: After disabling a service, it still is displayed as **Active** in the Adobe Experience Manager Web Console Components page (/system/console/components). However, you can view the log file for each service to verify that it was turned off.

### 9.6 Testing the Cluster Configuration

Before testing the configuration, you must disable the following components on all the nodes in the cluster:
You can use the ServicesConfigXML property of the /etc/ctctranslation/ctcconfig file to facilitate disabling these components on all nodes. For details, see “Turning Services On and Off on All Cluster Nodes” on page 107.

You enable these disabled components on a single cluster node before testing.

1. In your AEM instance, in your Web browser, navigate to /system/console/components. The Adobe Experience Manager Web Console Components page opens.

2. Click the Enable buttons [ ] in the Actions column to enable the following components:
   - com.claytablet.cq5.ctctranslation.impl.CTCDownloadServiceImpl
   - com.claytablet.cq5.ctctranslation.impl.CTCPrepareServiceImpl
   - com.claytablet.cq5.ctctranslation.impl.CTCStatusServiceImpl
   - com.claytablet.cq5.ctctranslation.impl.CTCUpdateTMServiceImpl
   - com.claytablet.cq5.ctctranslation.impl.CTCUploadServiceImpl

3. Test your configuration by sending a few content pages to the Machine Translation provider.
   - If your test is successful, you are done.
   - If your test fails, contact Clay Tablet Support. For details, see page 1.
10 Automatically Updating Your Connector Configuration

You can configure the Connector to automatically load and update its configuration. This is useful in the following scenarios:

- upgrading your instance of the Connector
- moving your installation into a new environment
- copying your installation to a new environment

To configure the Connector to automatically load a configuration, you create the `CTC_INIT_HOME` environment variable on the AEM server, and then you copy your exported configuration files into the `InitConfig` directory specified by this environment variable.

You can automatically import the your configuration from the following Connector pages, which are available from the Admin Tools menu in the Connector rail:

- Configuration page
- Language Mapping
- Component Mapping
- LSP and Keys

To export your configuration from the Connector:

Each Connector configuration page corresponds to an XML configuration file. The table below indicates which Connector configuration page corresponds to a particular configuration file. For detailed export instructions, refer to the last column in the table:

<table>
<thead>
<tr>
<th>To Export Your Configuration from This Page</th>
<th>Export This Configuration File</th>
<th>For Details, See...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Configuration page, Export Configuration button</td>
<td>ctcconfig.xml</td>
<td>&quot;Configuring Connector Global Settings&quot; on page 35</td>
</tr>
<tr>
<td>Configuration page, Export Translation Options button</td>
<td>transoptions.xml</td>

</table>
To Export Your Configuration from This Page | Export This Configuration File | For Details, See...
---|---|---
LSP and Keys | lspkeys.xml | "Configuring Translation Providers and the CMS Address and Platform Keys" on page 70

To set up the Connector to automatically import configuration files:

1. Create the CTC_INIT_HOME environment variable on the AEM server.

2. Set the value of this environment variable to a directory with read and write permissions that is accessible to the AEM process or instance, for example: C:\ctcdata\init_config\.

3. Restart the AEM server.

   The Connector now monitors this directory and automatically loads any configuration files in this directory. It saves the configuration files to the following location on the AEM server: /etc/ctctranslation.

To specify which configuration files to import:

- Copy the configuration files exported previously into the directory specified by the CTC_INIT_HOME environment variable.

   The Connector automatically loads these configuration files and updates its configuration.
11 Troubleshooting Installation and Configuration Issues

<table>
<thead>
<tr>
<th>Issue</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;Clay Tablet Connector Does Not Load&quot; on page 112</td>
<td>The Clay Tablet Connector does not load, or only the Connector landing page loads, but the Connector does not run.</td>
</tr>
<tr>
<td>&quot;A Translation Job Does Not Return&quot; on page 113</td>
<td>A translation job does not return, and the user does not receive notification of any issue.</td>
</tr>
<tr>
<td>&quot;Search Agents Are Not Displayed&quot; on page 113</td>
<td>The default search agents are not displayed in the Search Agents page. (Click Admin Tools &gt; Search Agents in the Clay Tablet Connector rail to open the Search Agents page.) The default search agents are not available for selection from the Search Using Agent dropdown list in the Pages page of the Bulk Translation wizard.</td>
</tr>
</tbody>
</table>

11.1 Clay Tablet Connector Does Not Load

One or both of the following issues may cause the Clay Tablet Connector not to load, or may cause only the Connector landing page to load, but the Connector does not run.

<table>
<thead>
<tr>
<th>Possible Issue</th>
<th>Explanation</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Configuration files are loaded from the InitConfig Clay Tablet local directory, and the user accessing this directory does not have read/write permissions.</td>
<td>If you are trying to load configuration files from InitConfig Clay Tablet local directory, the user accessing this directory must have read/write permissions.</td>
<td>For detailed configuration instructions, see &quot;Automatically Updating Your Connector Configuration&quot; on page 110.</td>
</tr>
<tr>
<td>The configuration files are pointing to an incorrect database location.</td>
<td>Refer to the general log file for details. If there are database errors, such as all database statements are failing, or if there is a general communications link failure, the database may be incorrectly configured.</td>
<td>Check the database strings in the configuration file.</td>
</tr>
</tbody>
</table>
11.2 A Translation Job Does Not Return

**Issue:** A translation job does not return, and the user does not receive notification of any issue.

**Explanation:** An error occurred when the Connector was deserializing an XML file. This error is displayed only in a log file.

**Workaround:** Restart AEM.

11.3 Search Agents Are Not Displayed

<table>
<thead>
<tr>
<th>Possible Issue</th>
<th>Explanation</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The default search agents are not displayed in the <strong>Search Agents</strong> page.</td>
<td>The configuration files are pointing to an incorrect database location. Refer to the general log file for details. If there are database errors, such as all database statements are failing, or if there is a general communications link failure, the database may be incorrectly configured.</td>
<td>Check the database strings in the configuration file.</td>
</tr>
<tr>
<td>(Click <strong>Admin Tools &gt; Search Agents</strong> in the Clay Tablet Connector rail to open the <strong>Search Agents</strong> page.)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The default search agents are not available for selection from the <strong>Search Using Agent</strong> dropdown list in the <strong>Pages</strong> page of the <strong>Bulk Translation</strong> wizard.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
12 Pre-Production Testing

After you complete the configuration, your Clay Tablet Connector for Adobe Experience Manager installation is ready for testing. We recommend sending only a few pages for translation in one language as an initial test. For detailed instructions, refer to the Clay Tablet Connector for Adobe Experience Manager User Guide, Special Edition for use with Lionbridge Freeway. Once successful, you can send as many languages as required.

Please coordinate with your translation provider for this test process.

If you have any concerns or questions, please contact Clay Tablet Support. For details, see "How to Contact Clay Tablet Support" on page 10.
### 13 Appendix: Language Codes

For detailed instructions on setting up the correct Clay Tablet language codes for every language your company uses for translation, see "Configuring Connector Languages" on page 61.

The Clay Tablet Connector has the following language codes:

<table>
<thead>
<tr>
<th>Type</th>
<th>Language Identifier</th>
<th>Language Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>String</td>
<td>Afrikaans</td>
<td>&quot;af-ZA&quot;</td>
